

WAD/WADE PRESS BRAKE

OUR COMPANY

For the past 40 years since 1982, our machines have been used by more than 50000 customers around the world. Over the years, ADH has focused on innovative research and development, and has become a leading manufacturer of metal sheet metal forming, laser cutting equipment and intelligent solutions.

- 40 years manufacturing & servicing experience
- Export to over 80 countries
- More than 40 technicians
- Rank top 5 in China

RELIABLE

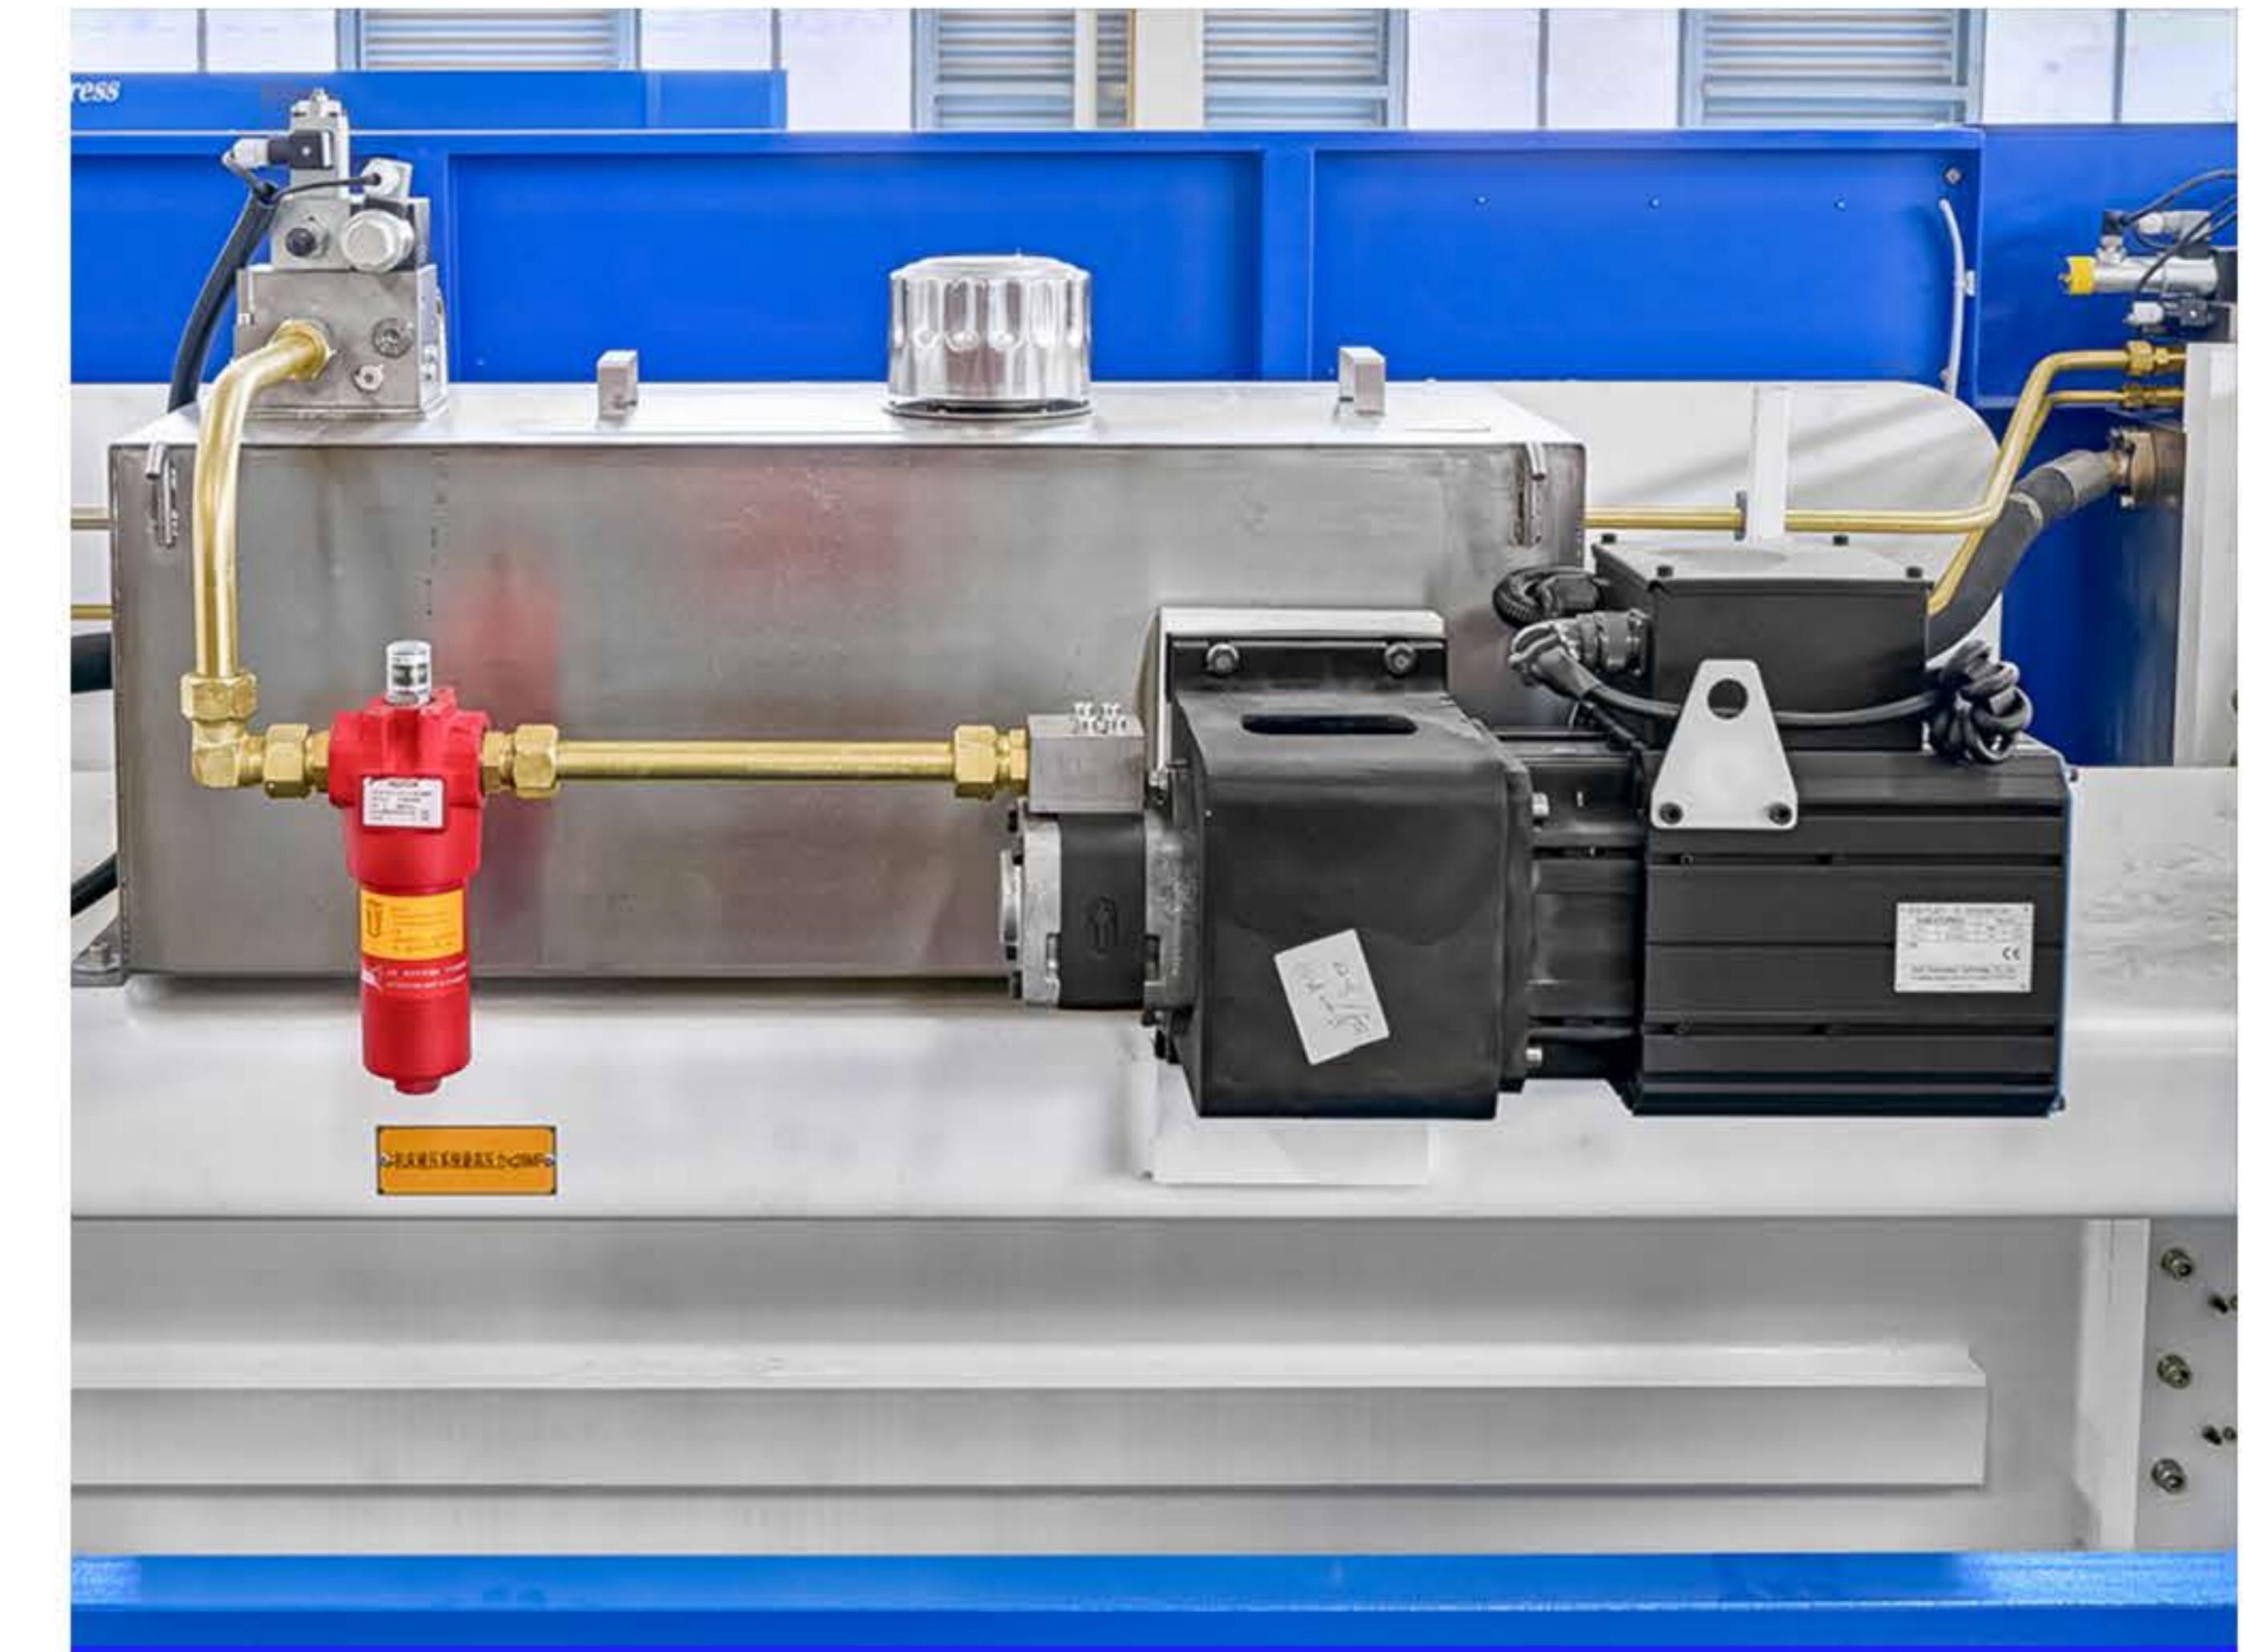

WAD SERIES

CNC TYPE

- New EU streamlined design
- Integrated frame welding
- Adopt Tempering treatment
- Adopt shot blast to remove rust
- Sprayed with anti-rust treatment
- Adopt CNC three-dimensional machining
- Y1 and Y2 axes control
- Quiet speed waiting and fast down
- Low noise during pressing and return
- 60% less energy consumption
- Stable oil temperature
- More technical innovations
- Easy to operate
- High-frequency hydraulic control technology

EQUIPMENT FEATURES

MECHANICAL STRUCTURE

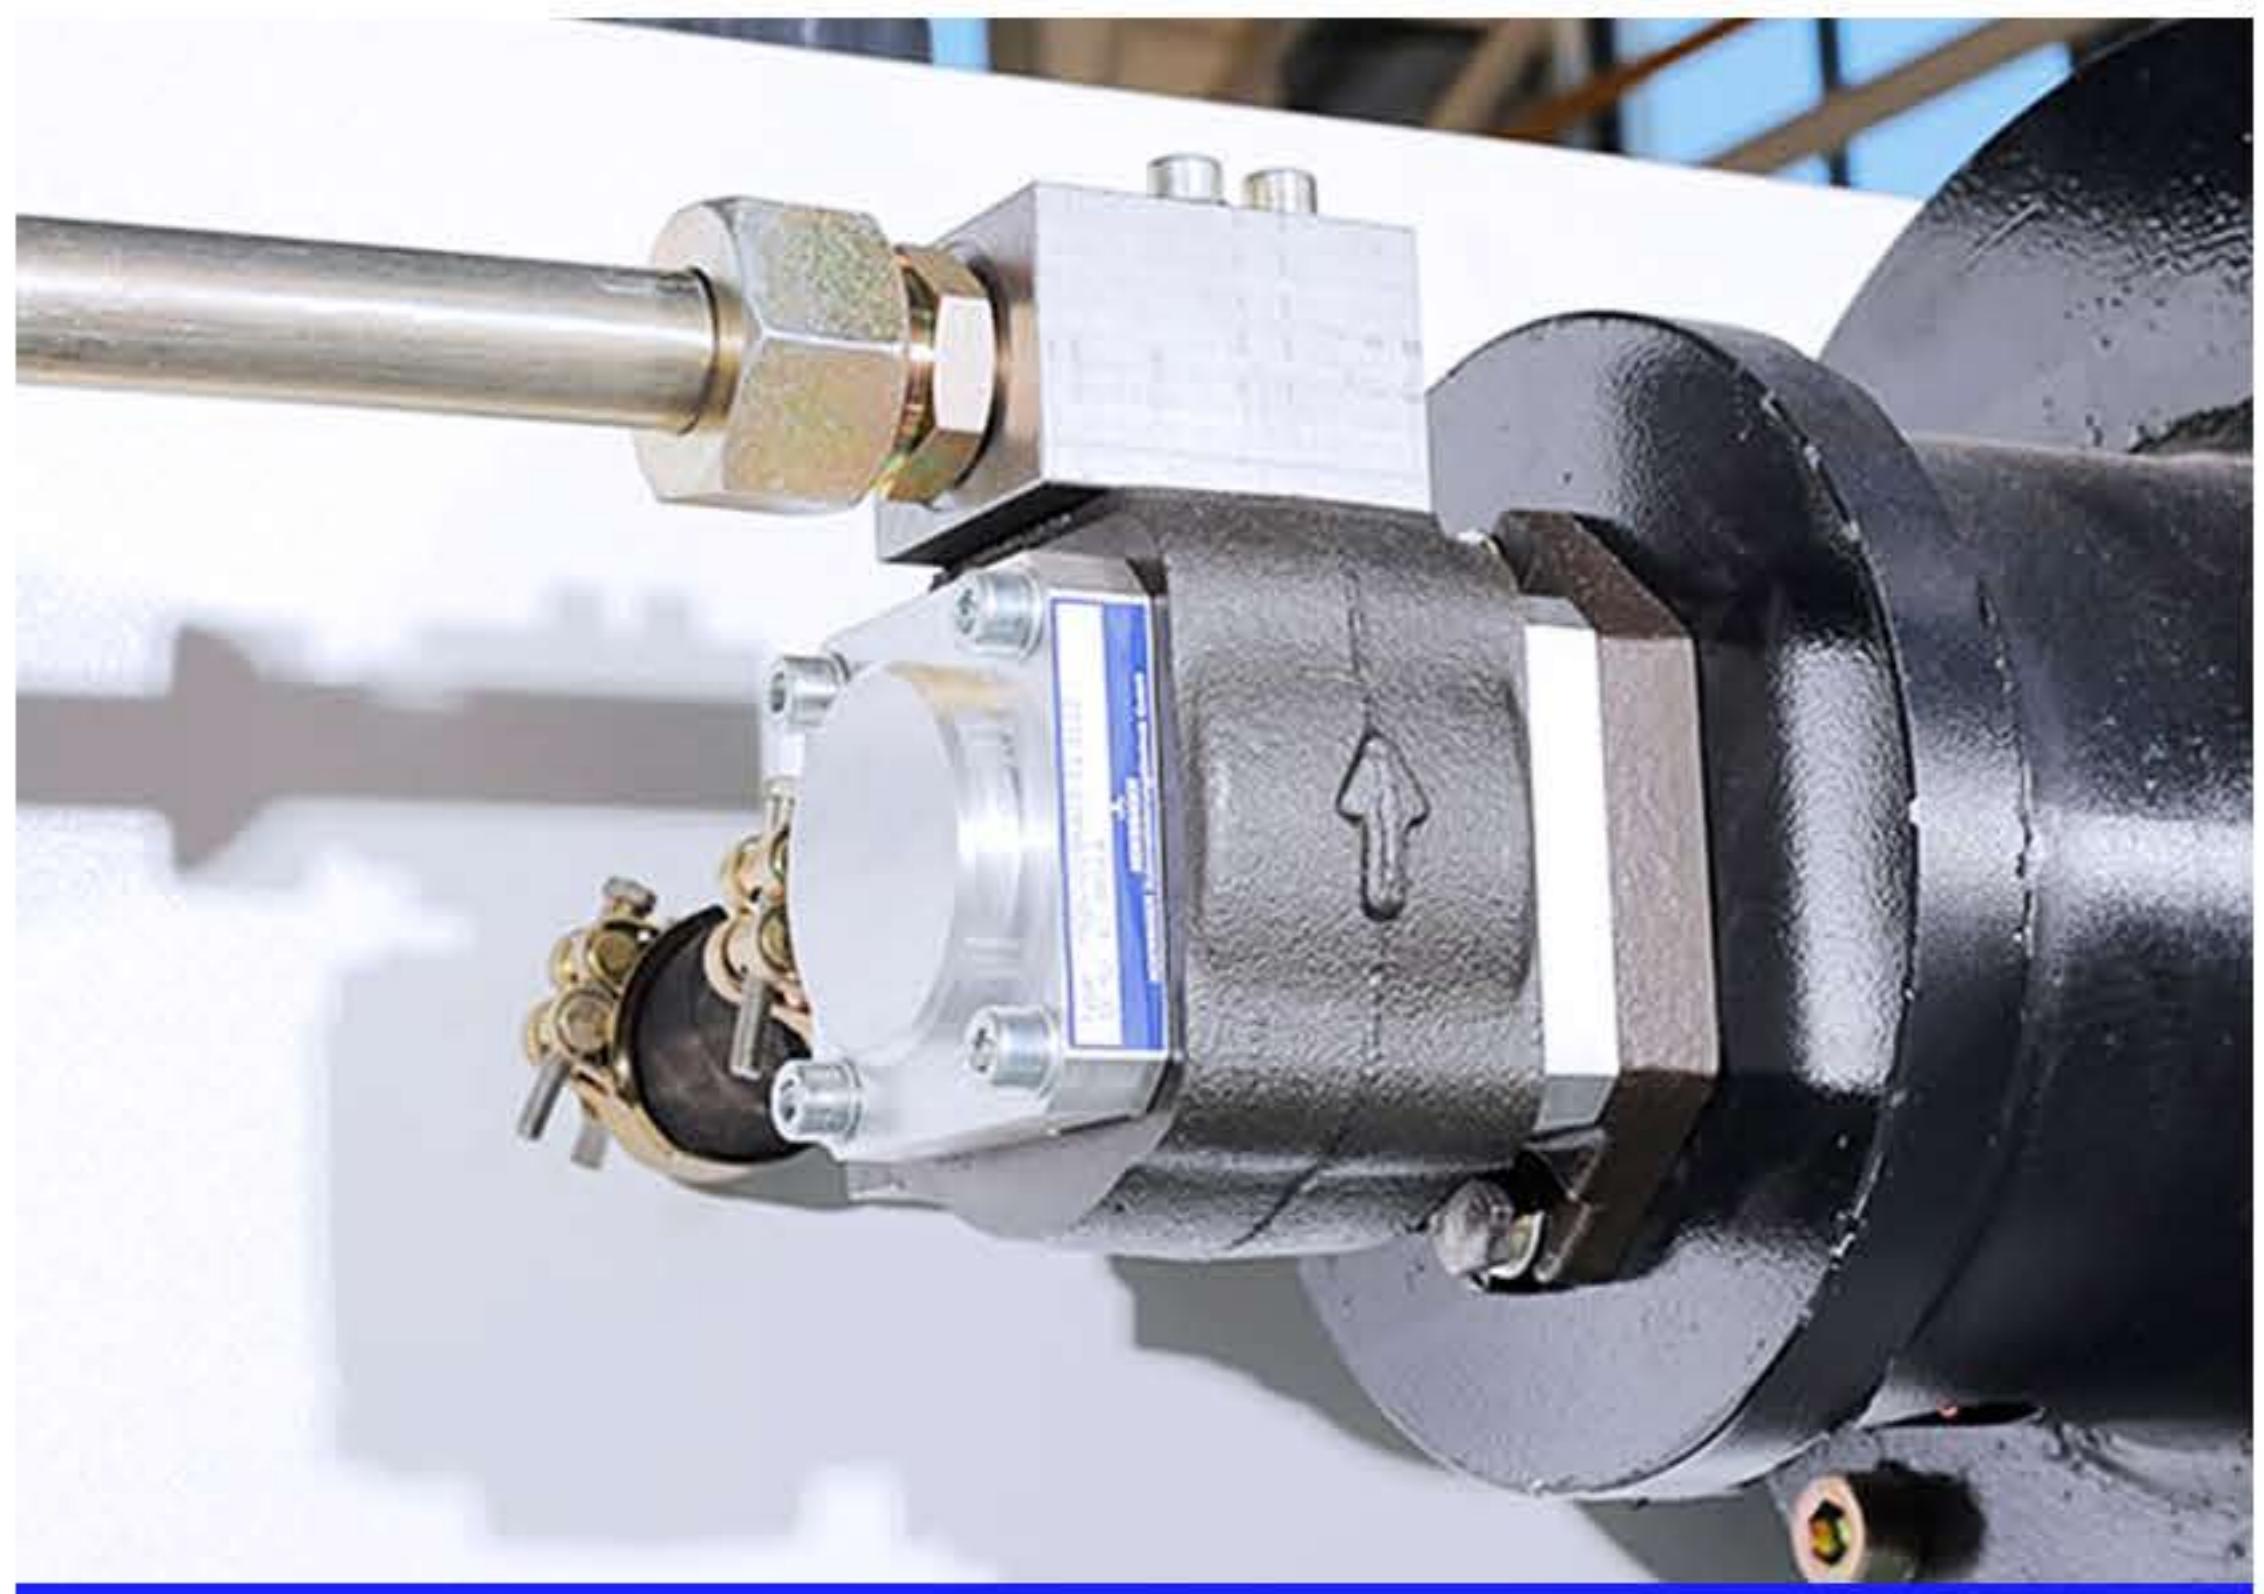

- The main mechanical structure of the press brake consists of the frame, column, ram, worktable, the main cylinder and backgauge.
- The main components are through finite element analysis and optimized design by 3D software to fully guarantee the structural strength and rigidity of each component.

FRAME

- The foundation of every ADH press brake is a solid, mono-block frame which made from high yield steel.
- Which means our press brakes will perform accurately and reliably year after year.
- Every press brake frame is tempered.
- We're so confident in our frames so that we offer a 15-year warranty with our standard machines.

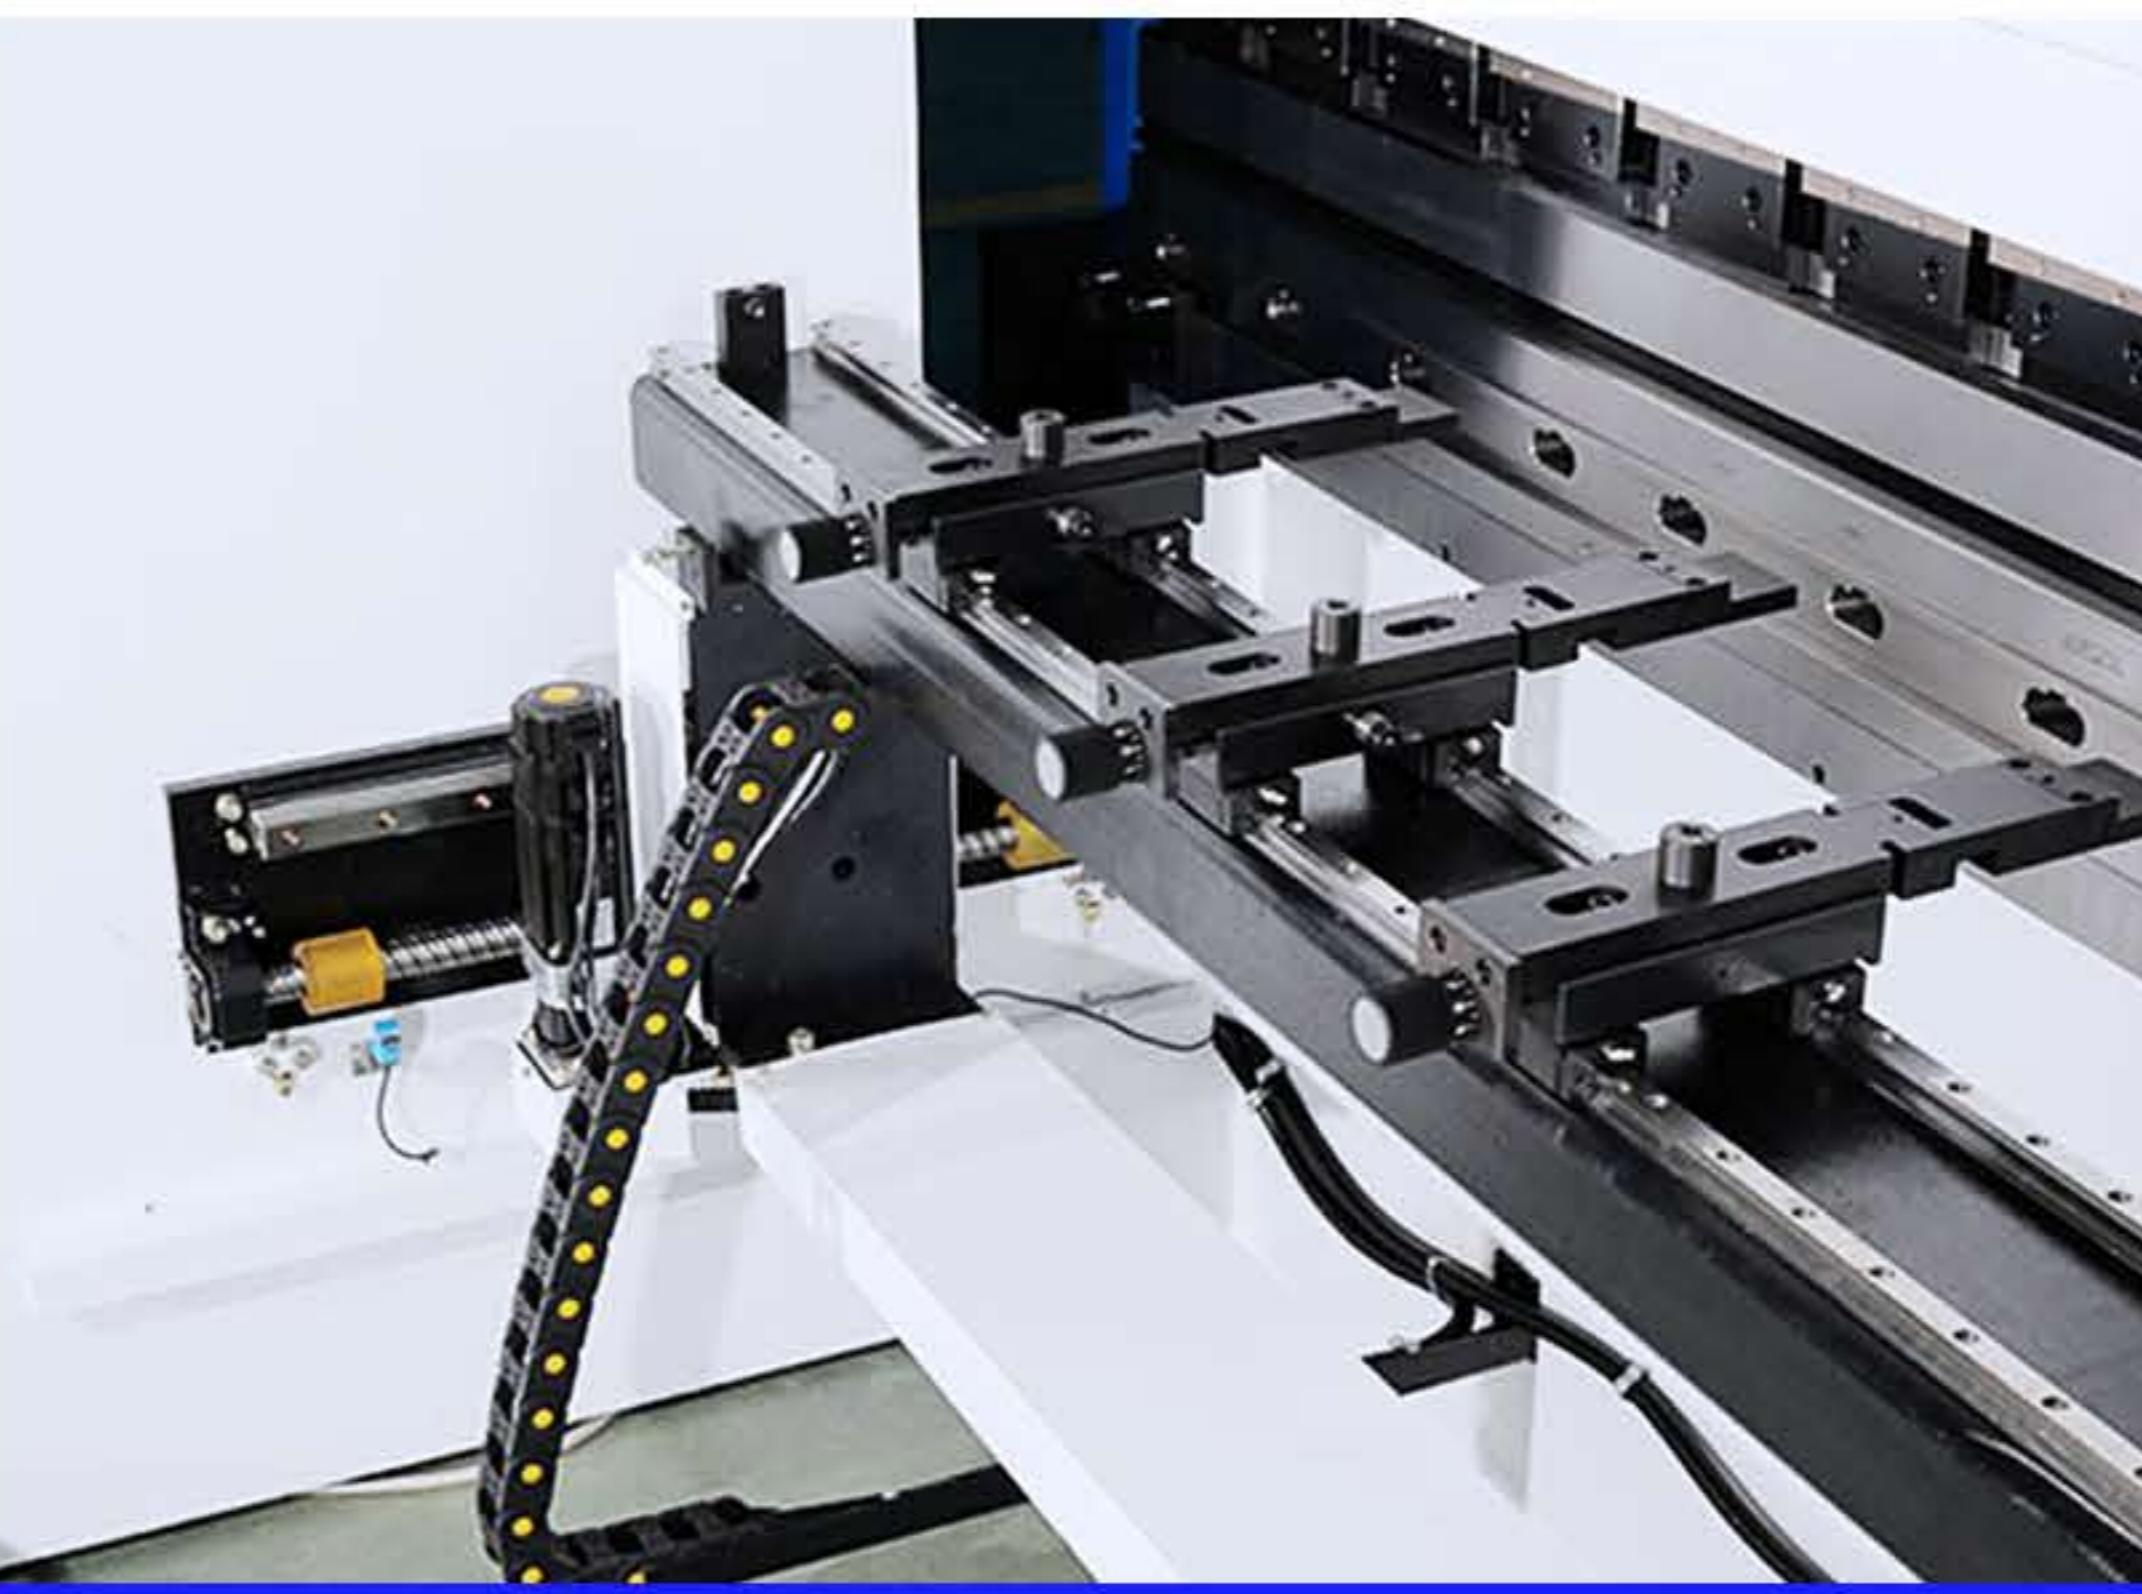

SERVO MOTOR

- Using servo motor as the main power source of hydraulic pump can save about 40% energy
- The overall efficiency of the slider increases by about 7-20%
- Oil temperature can be reduced by about 10-20°C

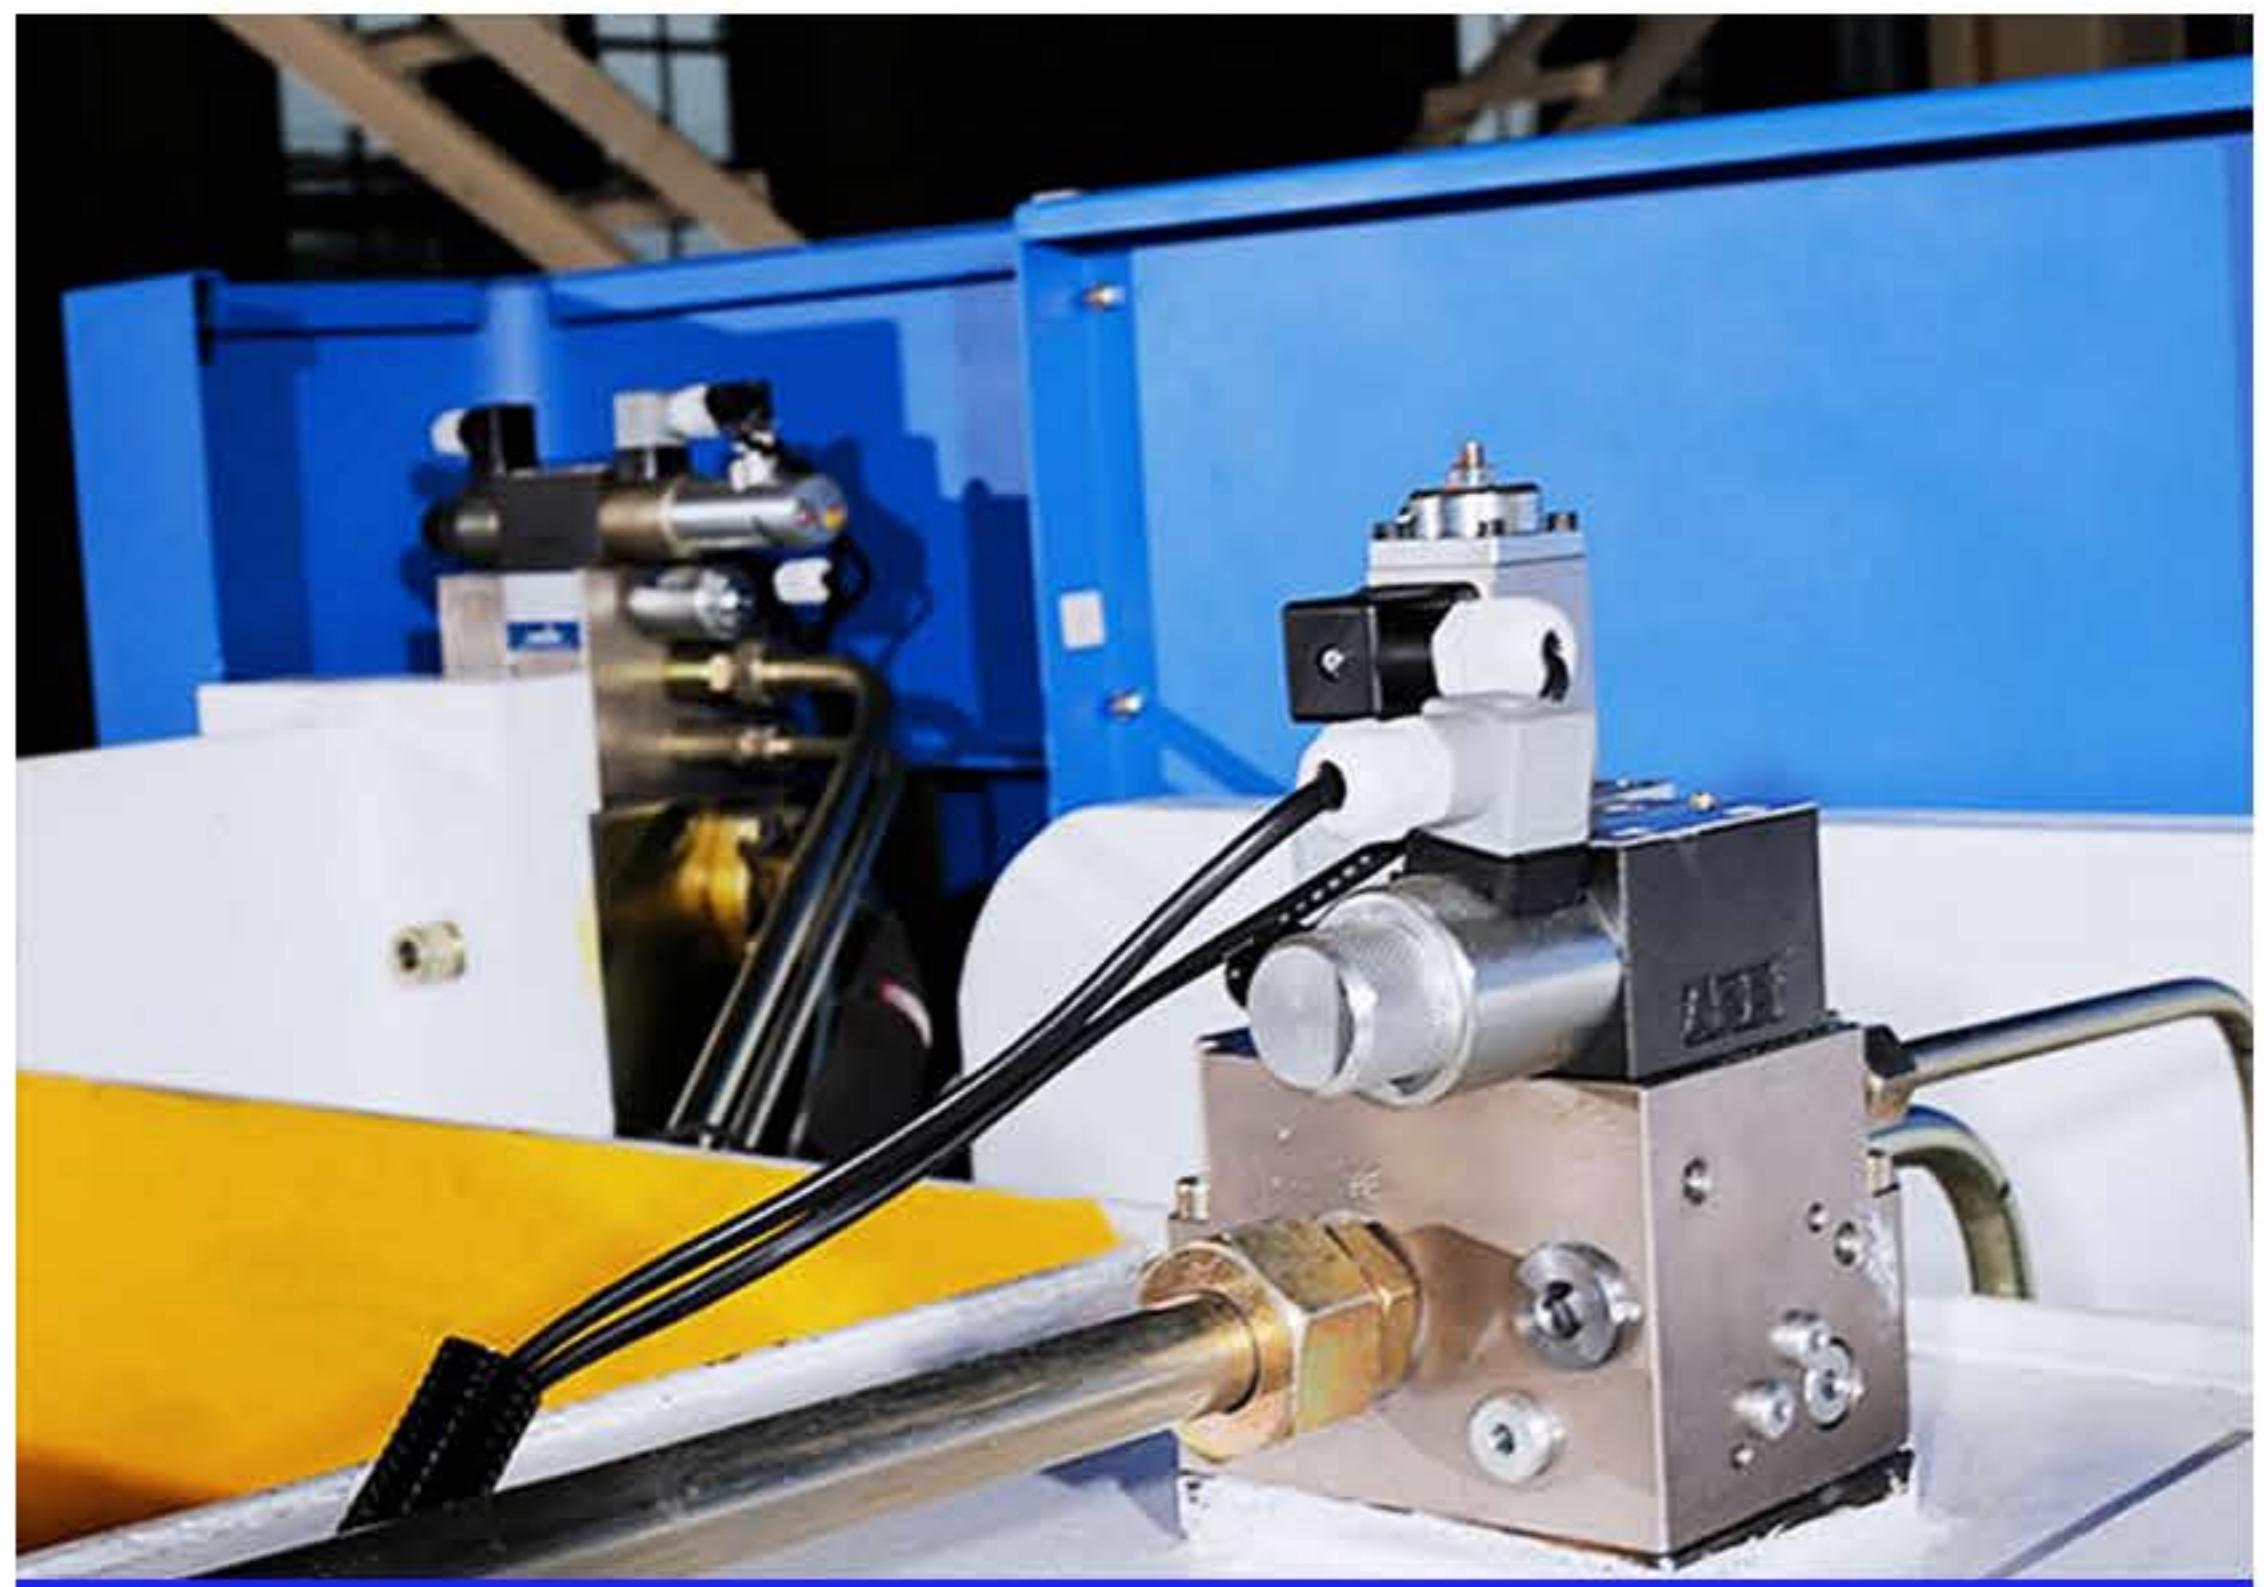

OIL PUMP

- HAWE / VOITH / ELKERLE:
Amazing low noise, made of high strength castiron and unique design for inner noise reduction
- Low sensitivity to oil pollution and assure of long service life

BACKGAUGE

- Taiwan PMI ball screw and linear rail
- Timing belt & wheel mechanism
- Servo motor control
- Adjustable height of backgauge finger

HYDRAULIC SYSTEM

- Our press brake machine uses Hoerbiger integrated hydraulic control system that make it more reliable and easy for maintenance.

FAST CLAMP

- The standard equipped fast clamp will help you replace the top punch in very short time.
- Convenient and time-saving.
- Fast intermediate loading and unloading function to improve work efficiency

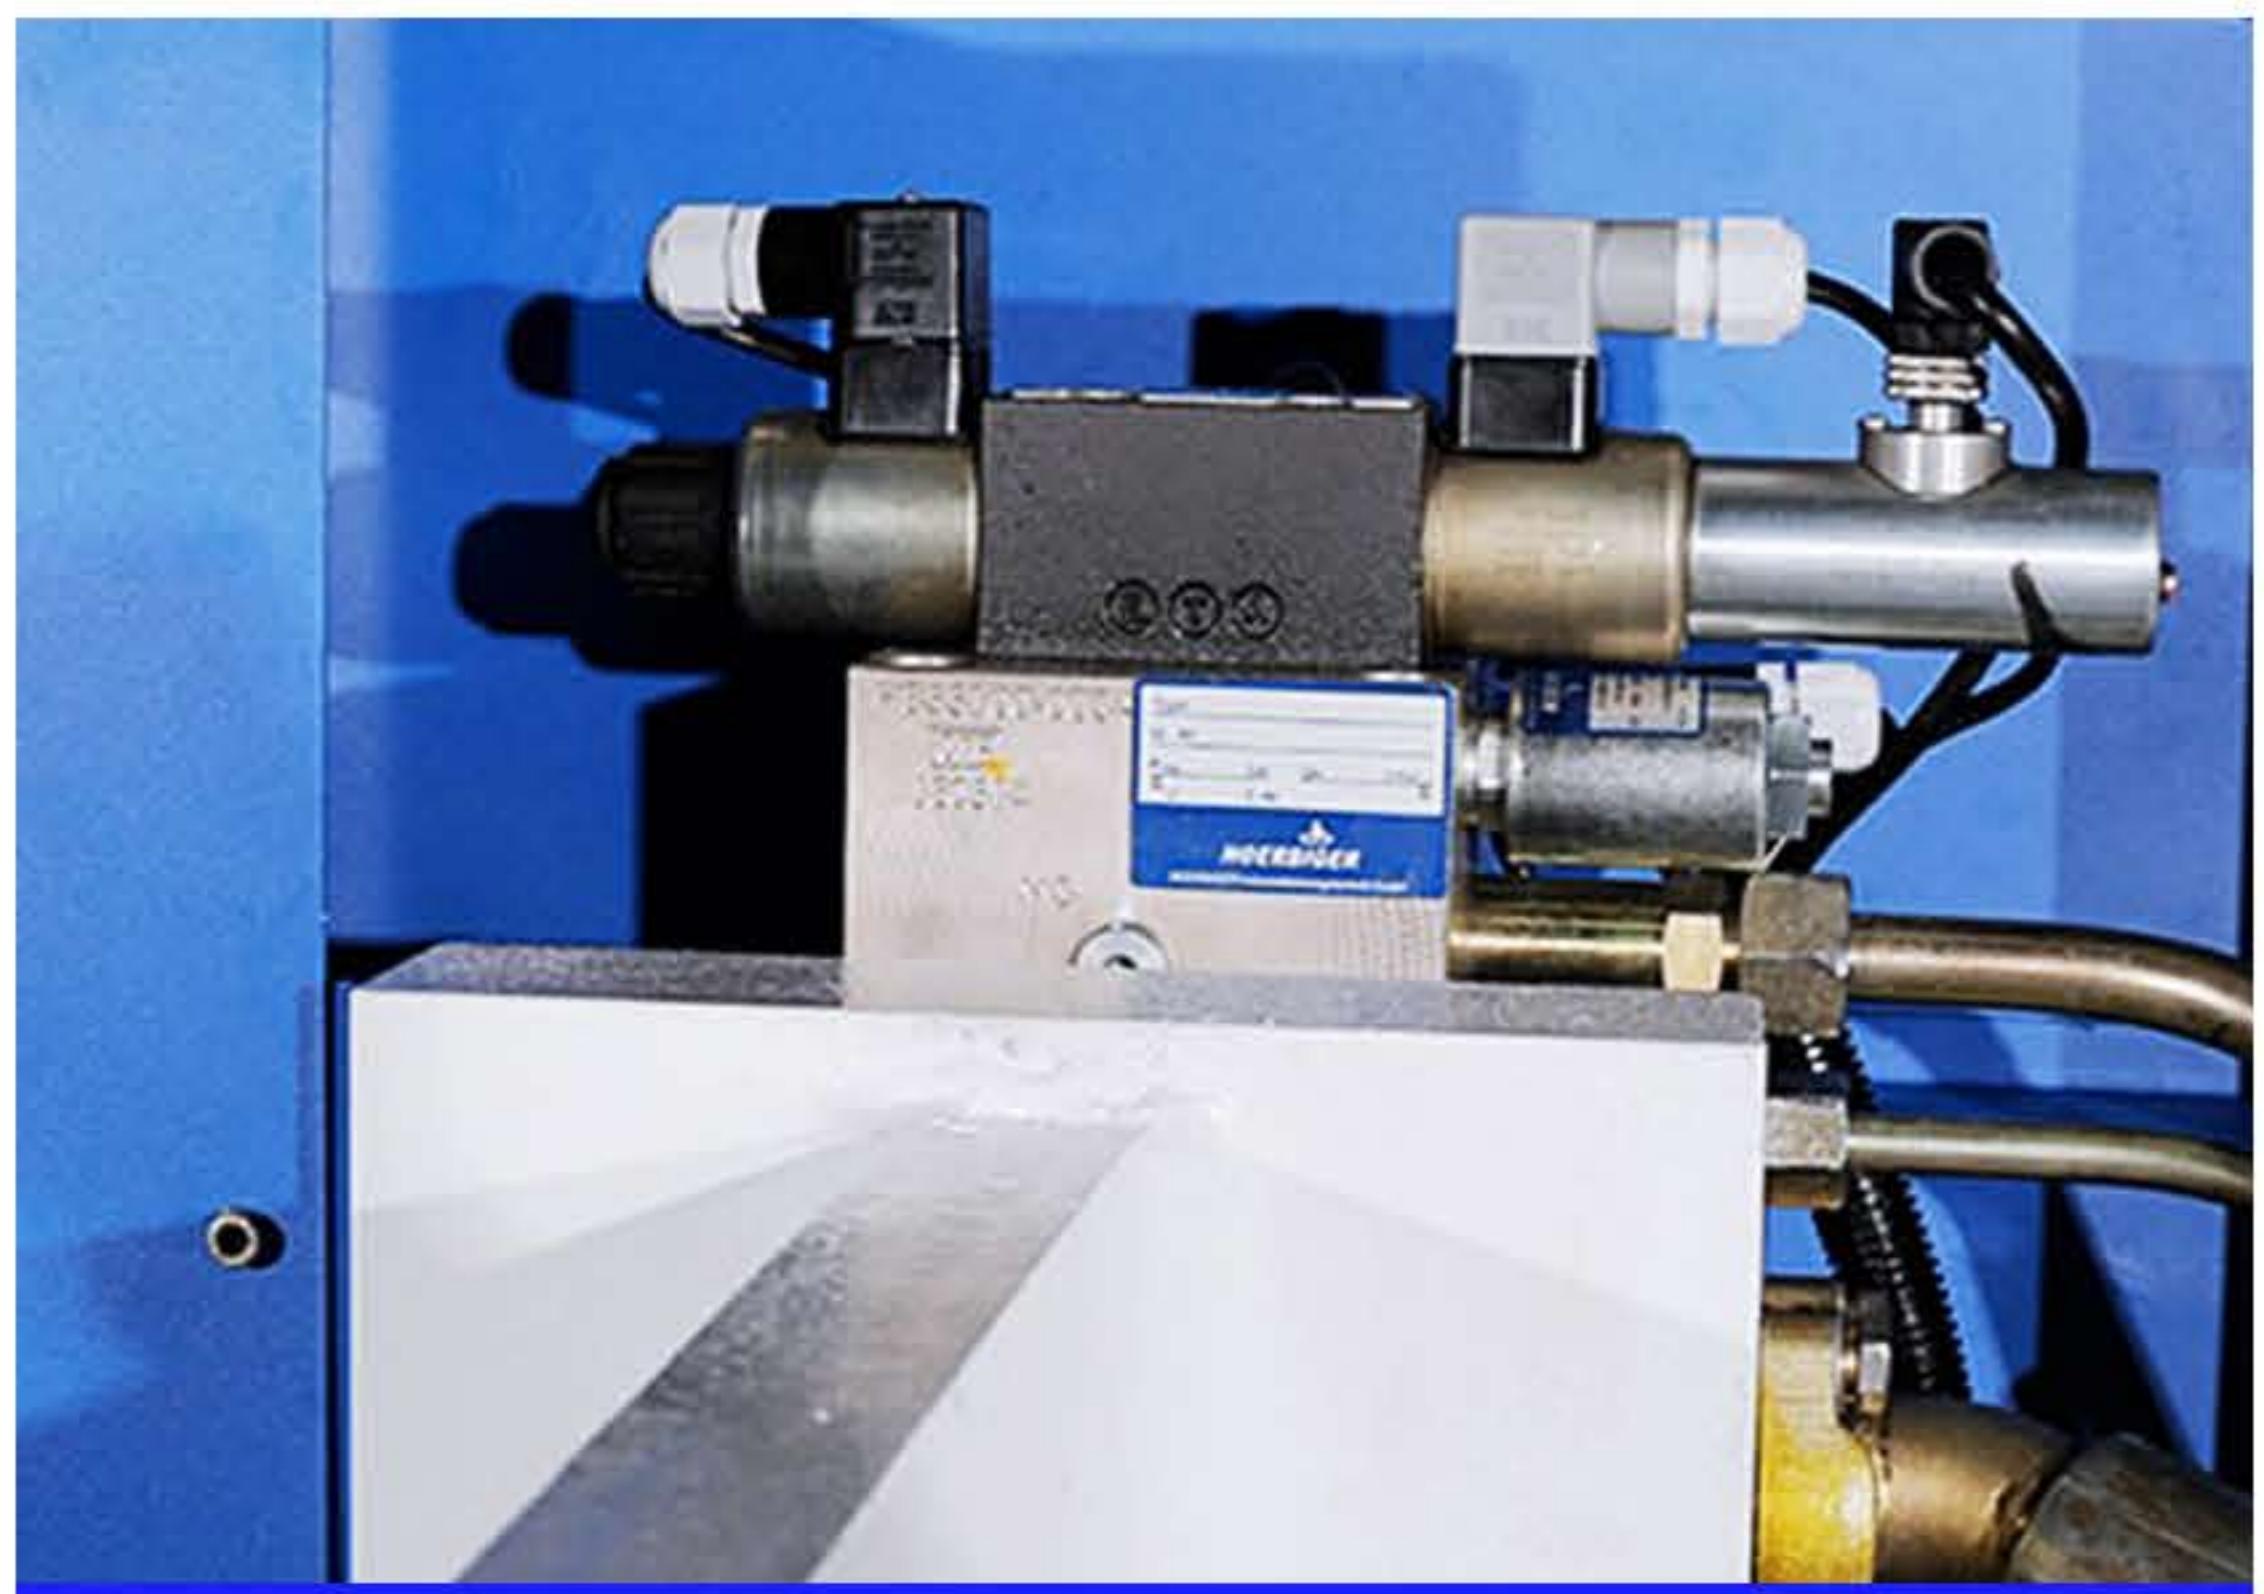

ELECTRICAL SYSTEM

- Our press brake adopt Schneider electrical components. The high quality electric parts can make the machine performing well even the electricity is not stable and customers can easily get the replacement anywhere in the world.

PUNCH & DIE

- The standard top punch and dual-V bottom die are specially designed for bending sheet metals. More press brake toolings can be selected as per your practical use. Material and HRC47 degree values are marked on it.

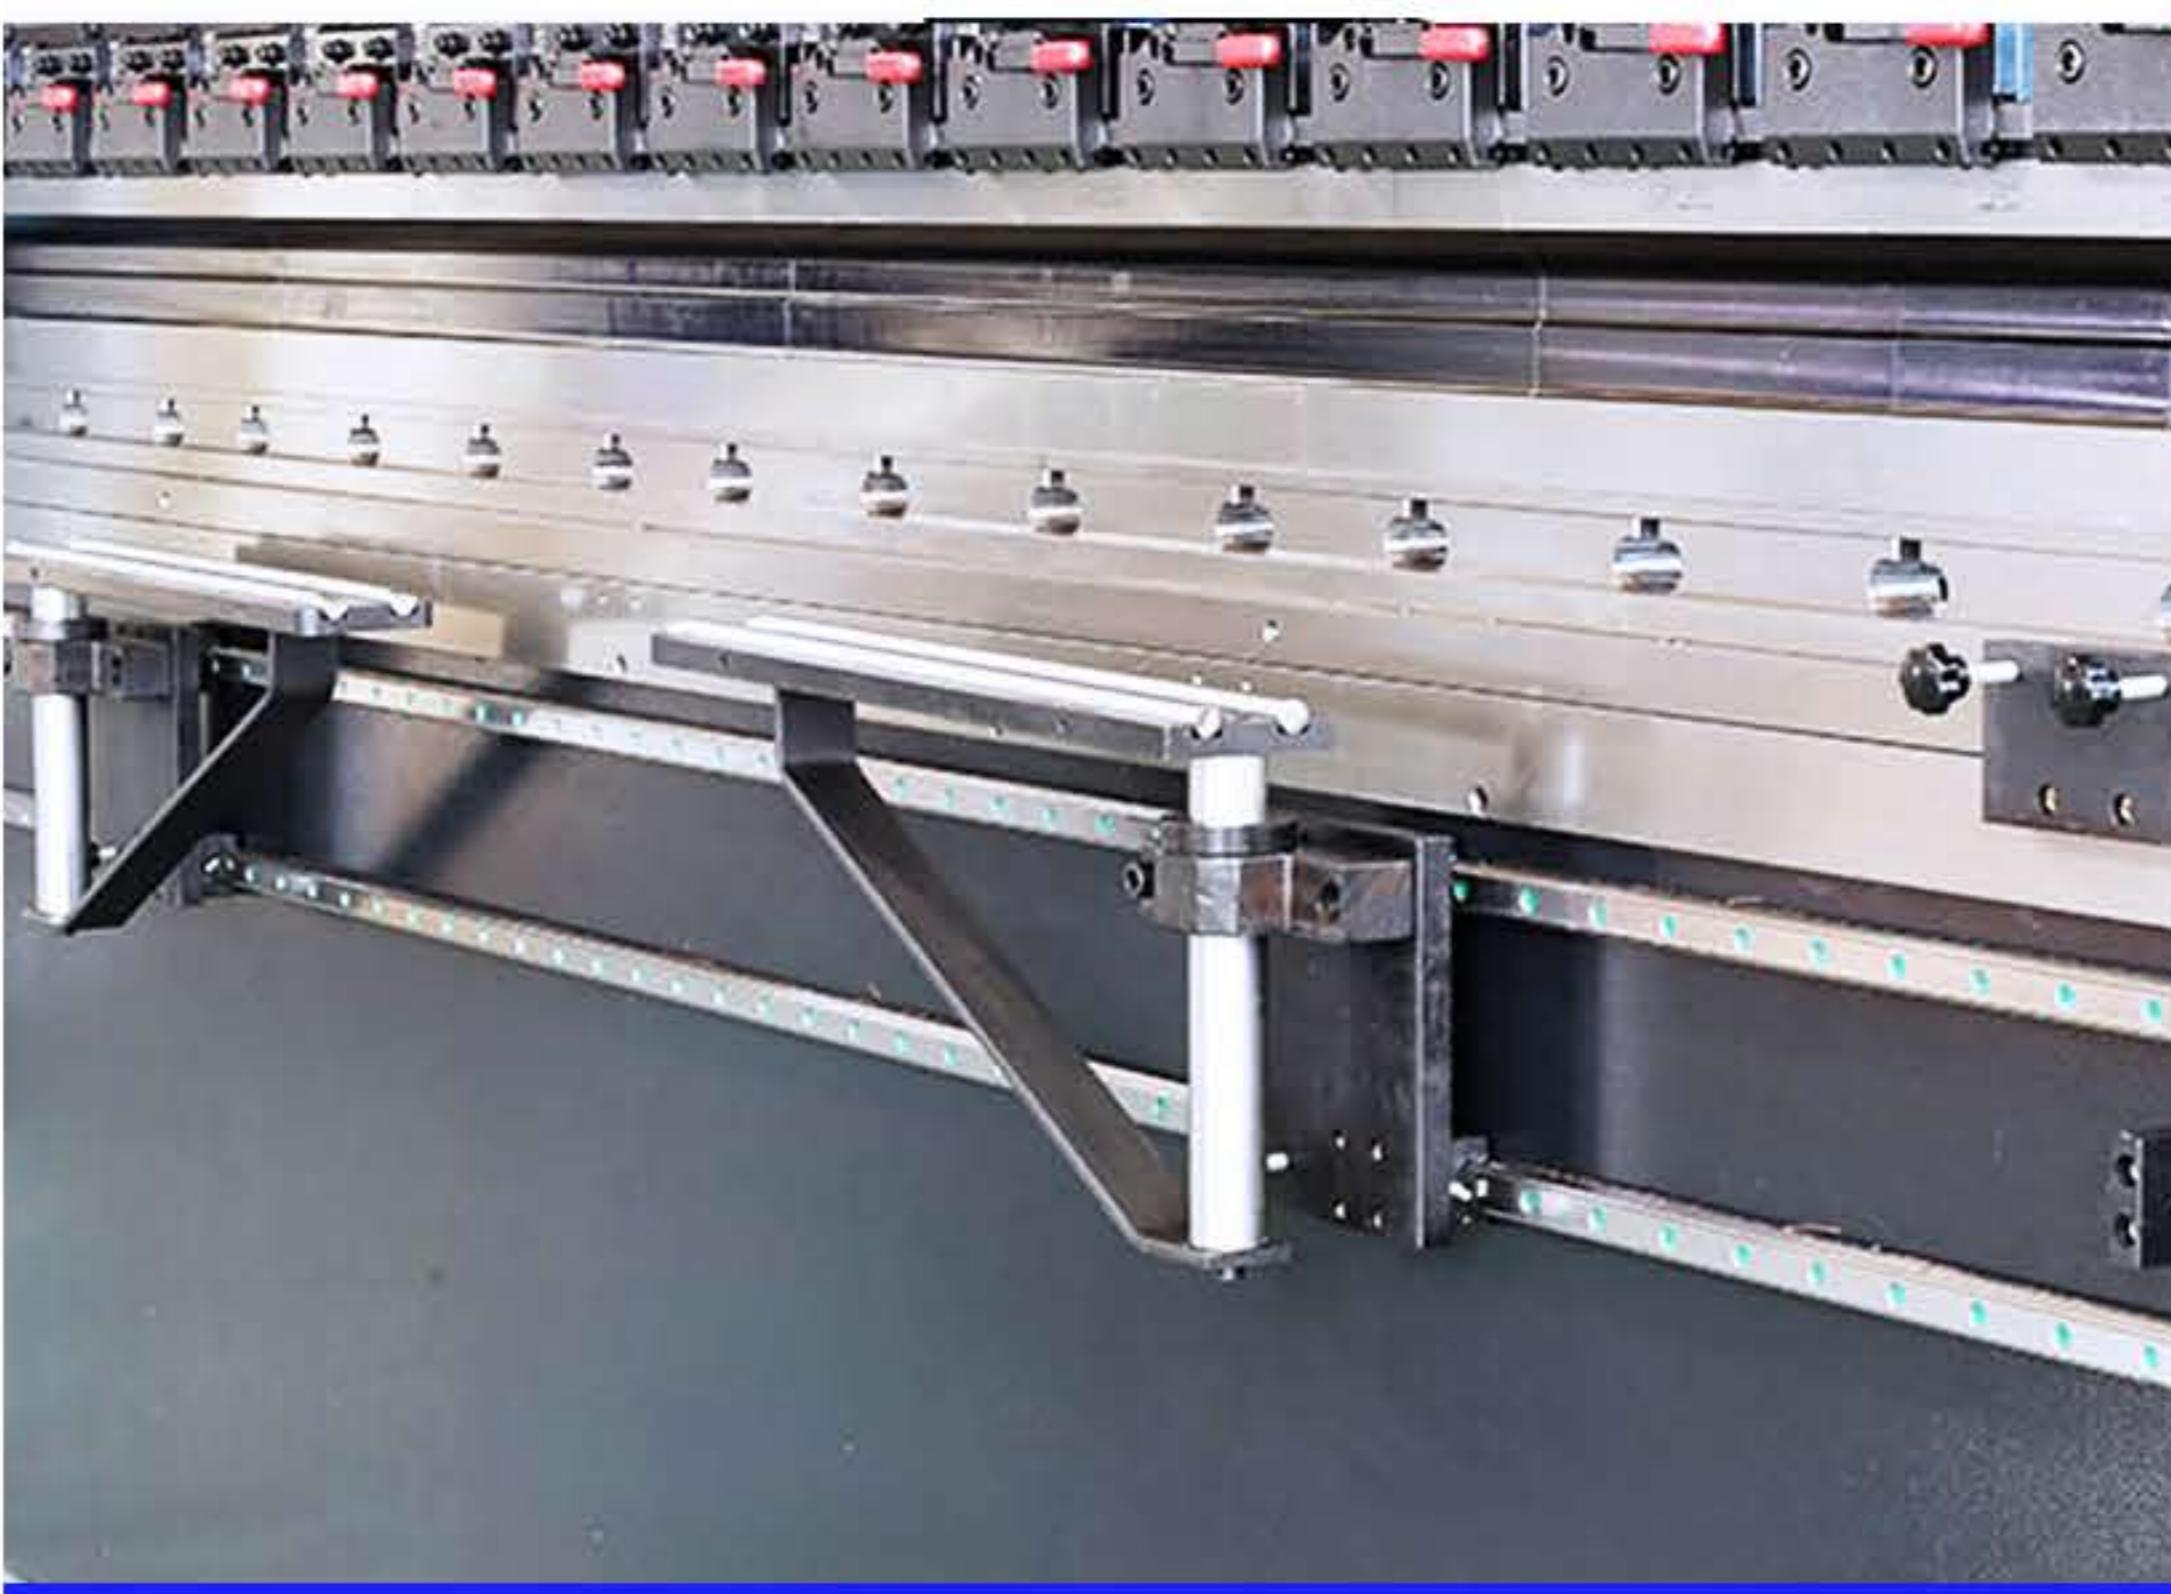

GERMANY HAWE VALVE

- Adopt Germany's HAWE integrated structure of oil pump and hydraulic valve to ensure the bending accuracy.

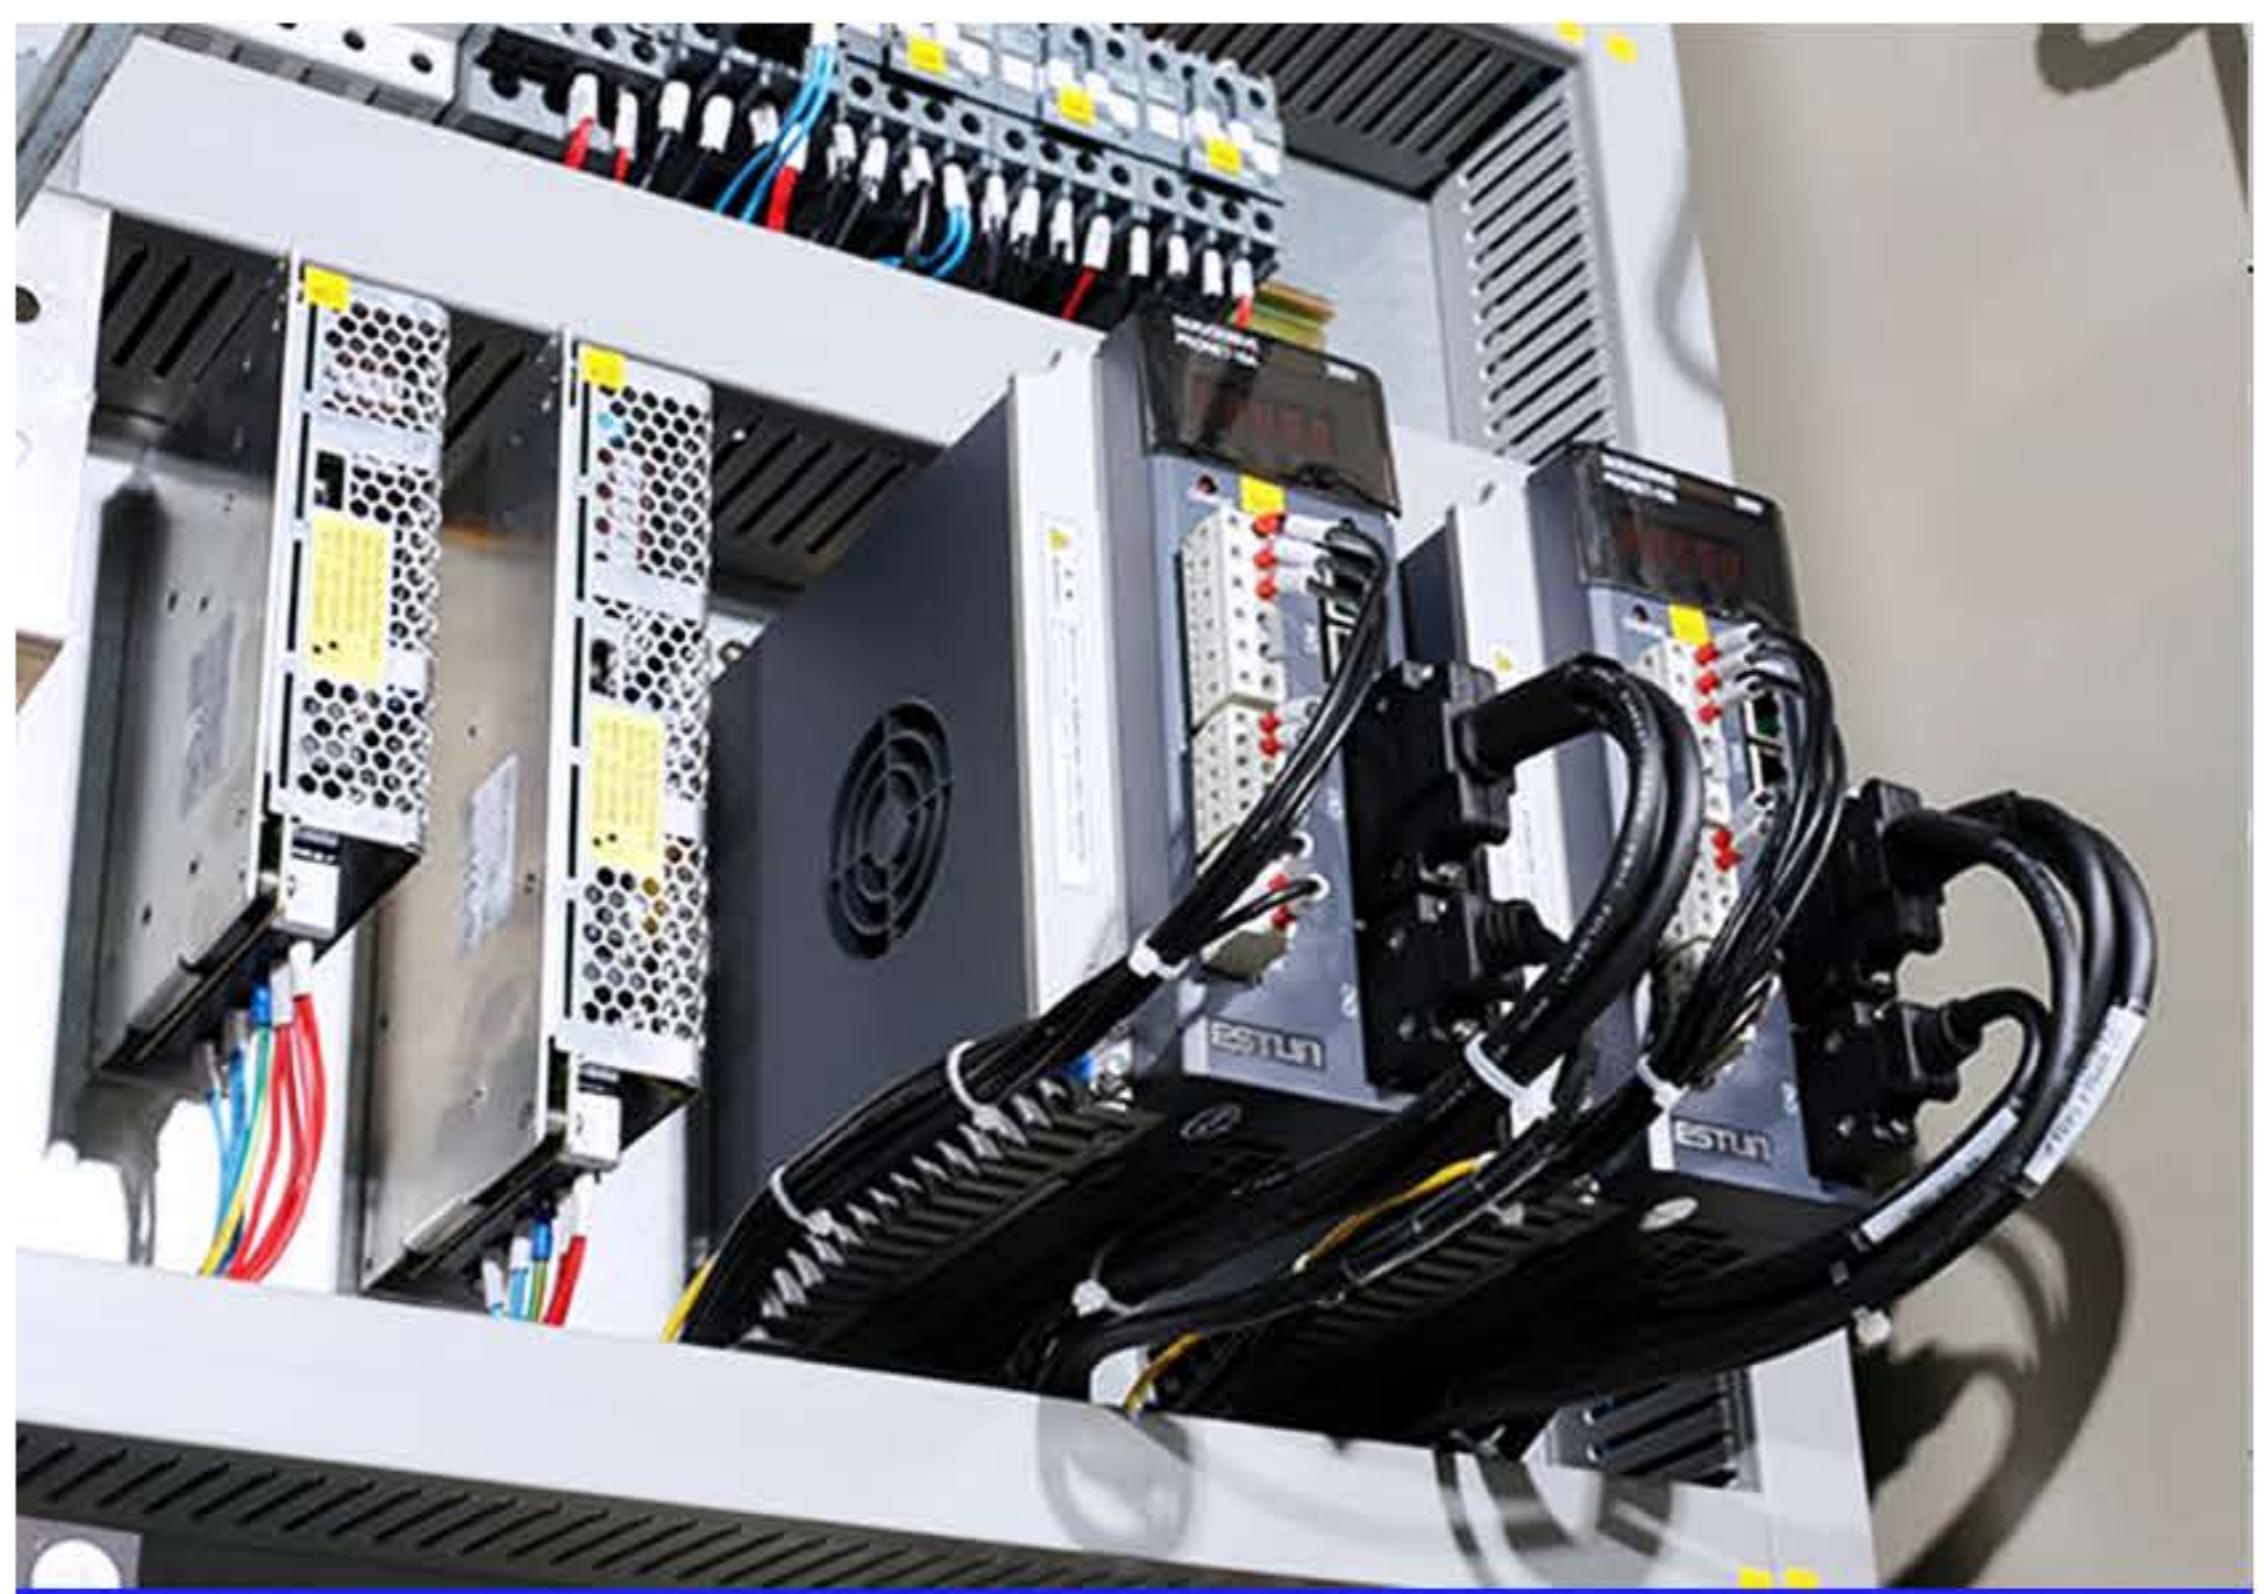

BACKGAUGE FINGERS

- Our WAD series CNC press brake will equip with 3 pieces of backgauge fingers with four adjustable range for positioning, with the accuracy of +0.01mm.

DUAL LINEAR GUIDE

- The front support arm with two linear guide is optional.

SERVO DRIVE

- Estun brand servo drive

(OPTIONAL) LASER PROTECTION

- Does not affect the efficiency of the press brake, can completely solve the safety problem.

QUALITY
IS
WHAT
WE
PURSUE

DELEM DA-53T

- Standard 4+1 axis control
- Menu*single-driven parameter programming
- 10.4" LCD true color TFT display
- Workbench flexibility proof control
- Mould Library
- USB interface
- Advanced Y-axis control algorithm, which can control both closed-loop and open-loop valves
- Built-in control valve amplifier
- PLC
- Analysis Software

CYBELEC TOUCH 12

- Controls 4 axes.
- Automatic bend sequencing (option).
- Bend allowance calculation.
- Pressure - crowning calculation.
- Modular tools for each part or bend.
- Angle and back gauge correction.
- Telemaintenance via wireless connection with PC or notebook.
- USB port for memory stick for data transfer/backup.

DELEM DA-58T

- 2D graphical touch screen programming
- 15"high resolution colour TFT
- Bend sequence calculation
- Crowning control
- Servo and frequency inverter control
- Advanced Y-axis control algorithms for closed-loop as well as open-loop valves
- USB, peripheral interfacing
- Profile-T offline software

ESA S630

- Numerical or optional 2D Graphical programming.
- Equipped with 10" colour touch screen.
- Backgauge control
- Angle programming
- Tooling libraries.
- "Simple manual" mode for quick bends.
- Retract function
- Storage of thousands of part programs.
- External USB memory stick port.

DELEM DA-66T

- 2D graphical touch screen programming mode
- 3D visualization in simulation and production
- 17"high resolution colour TFT
- Full Windows application suite
- Delem Modusys compatibility (module scalability and adaptivity)
- USB, peripheral interfacing
- Sensor bending & correction interface
- Profile-TL offline software

DELEM DA-69T

- 3D and 2D graphical touch screen programming mode
- 3D visualisation in simulation and production
- 17" high resolution colour TFT
- Full Windows application suite
- Delem Modusys compatibility (module scalability and adaptivity)
- USB, peripheral interfacing
- User specific application support within the controllers multitasking environment
- Sensor bending & correction interface
- Profile-T3D offline software

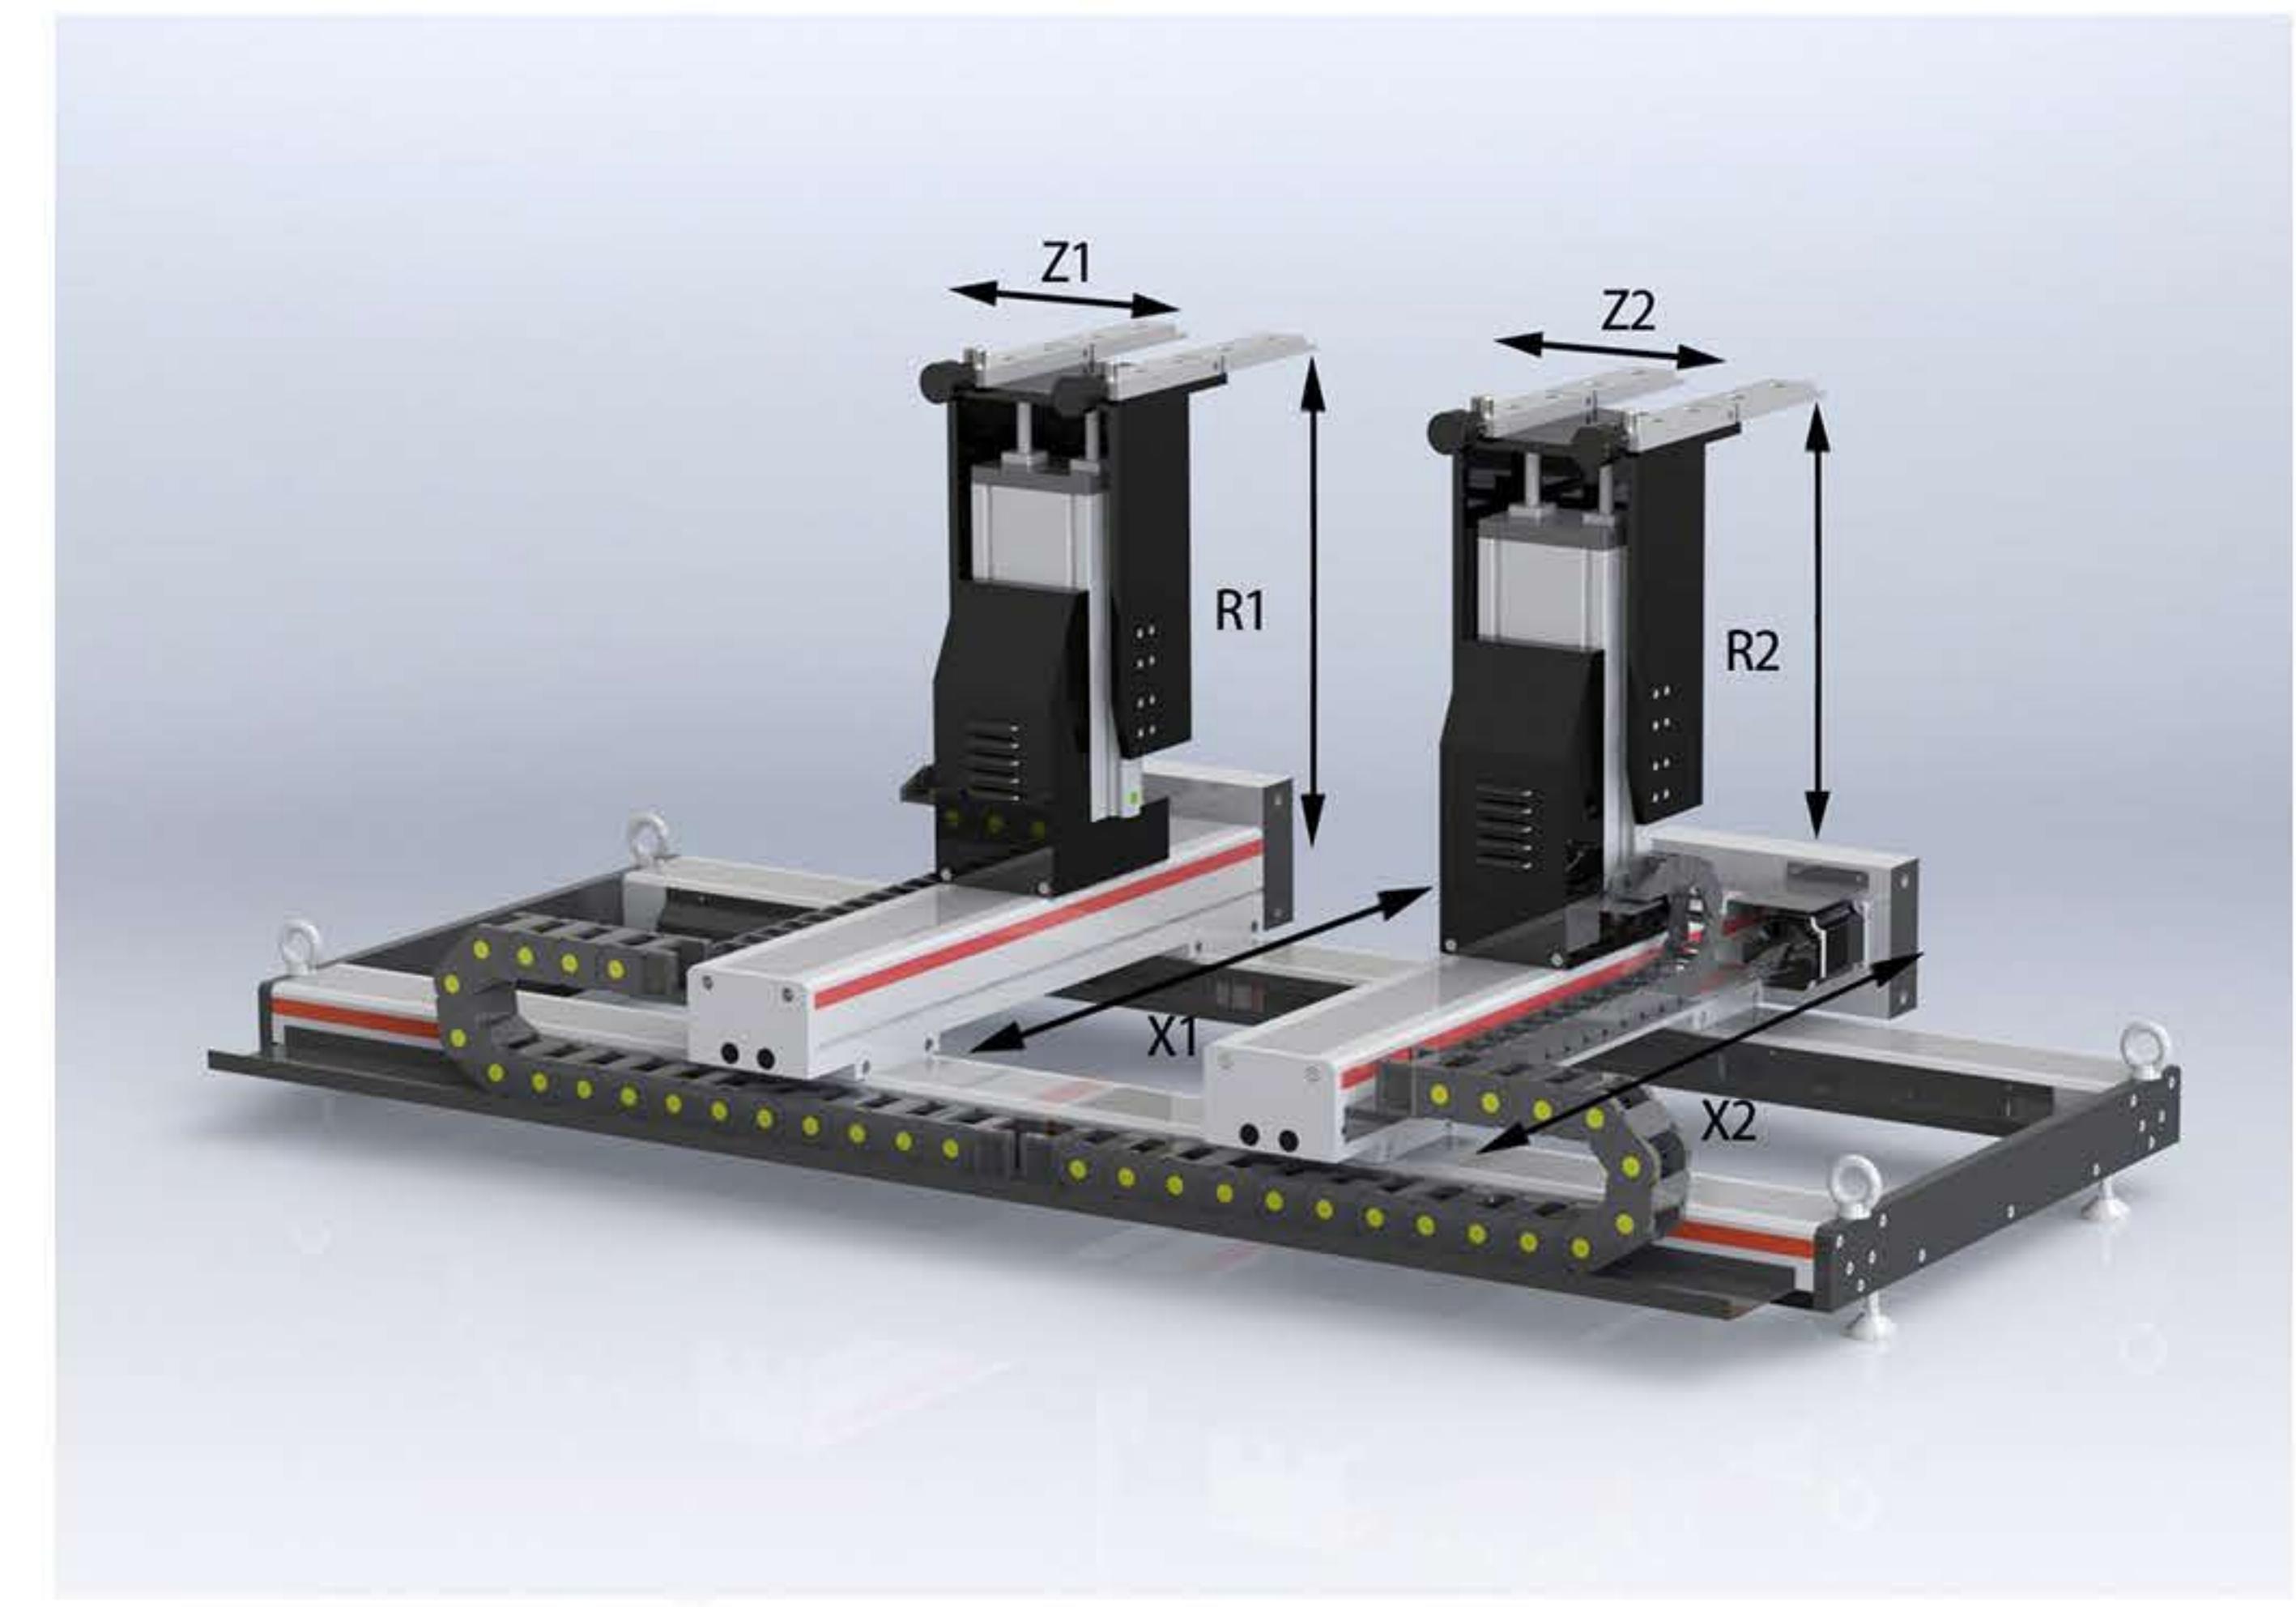

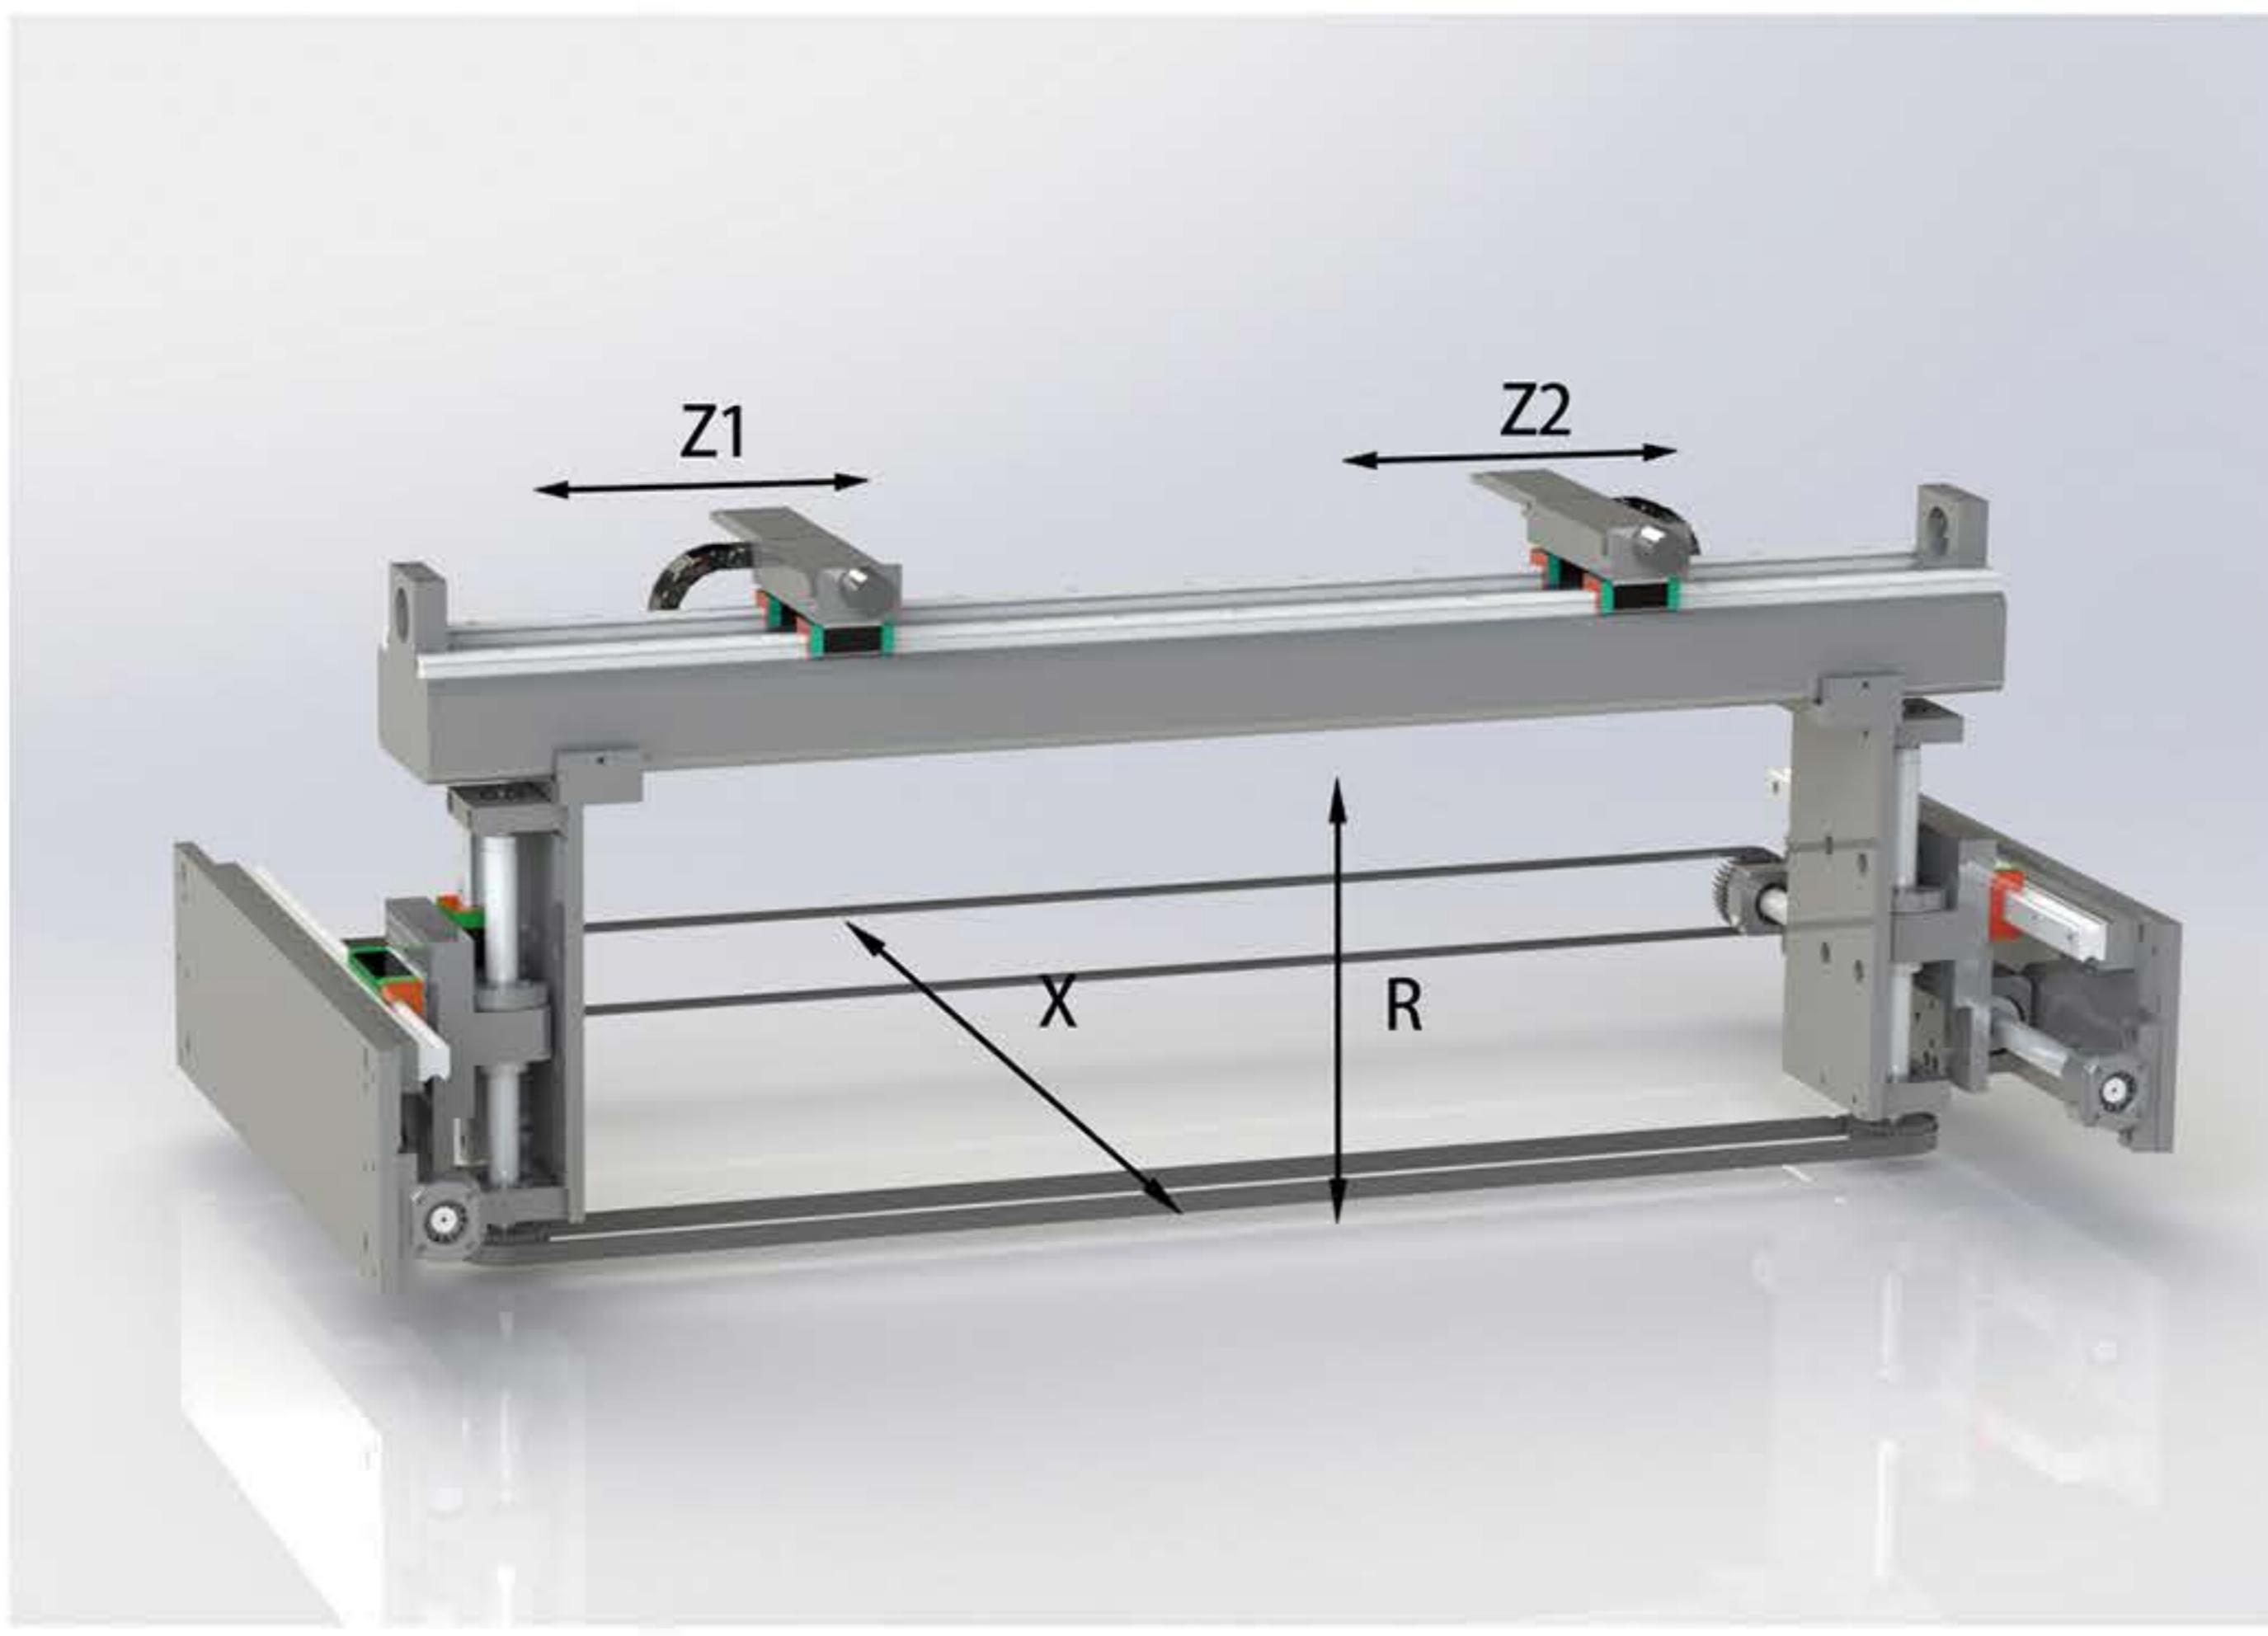

BACKGAUGE

X-forward & backward

CROWNING

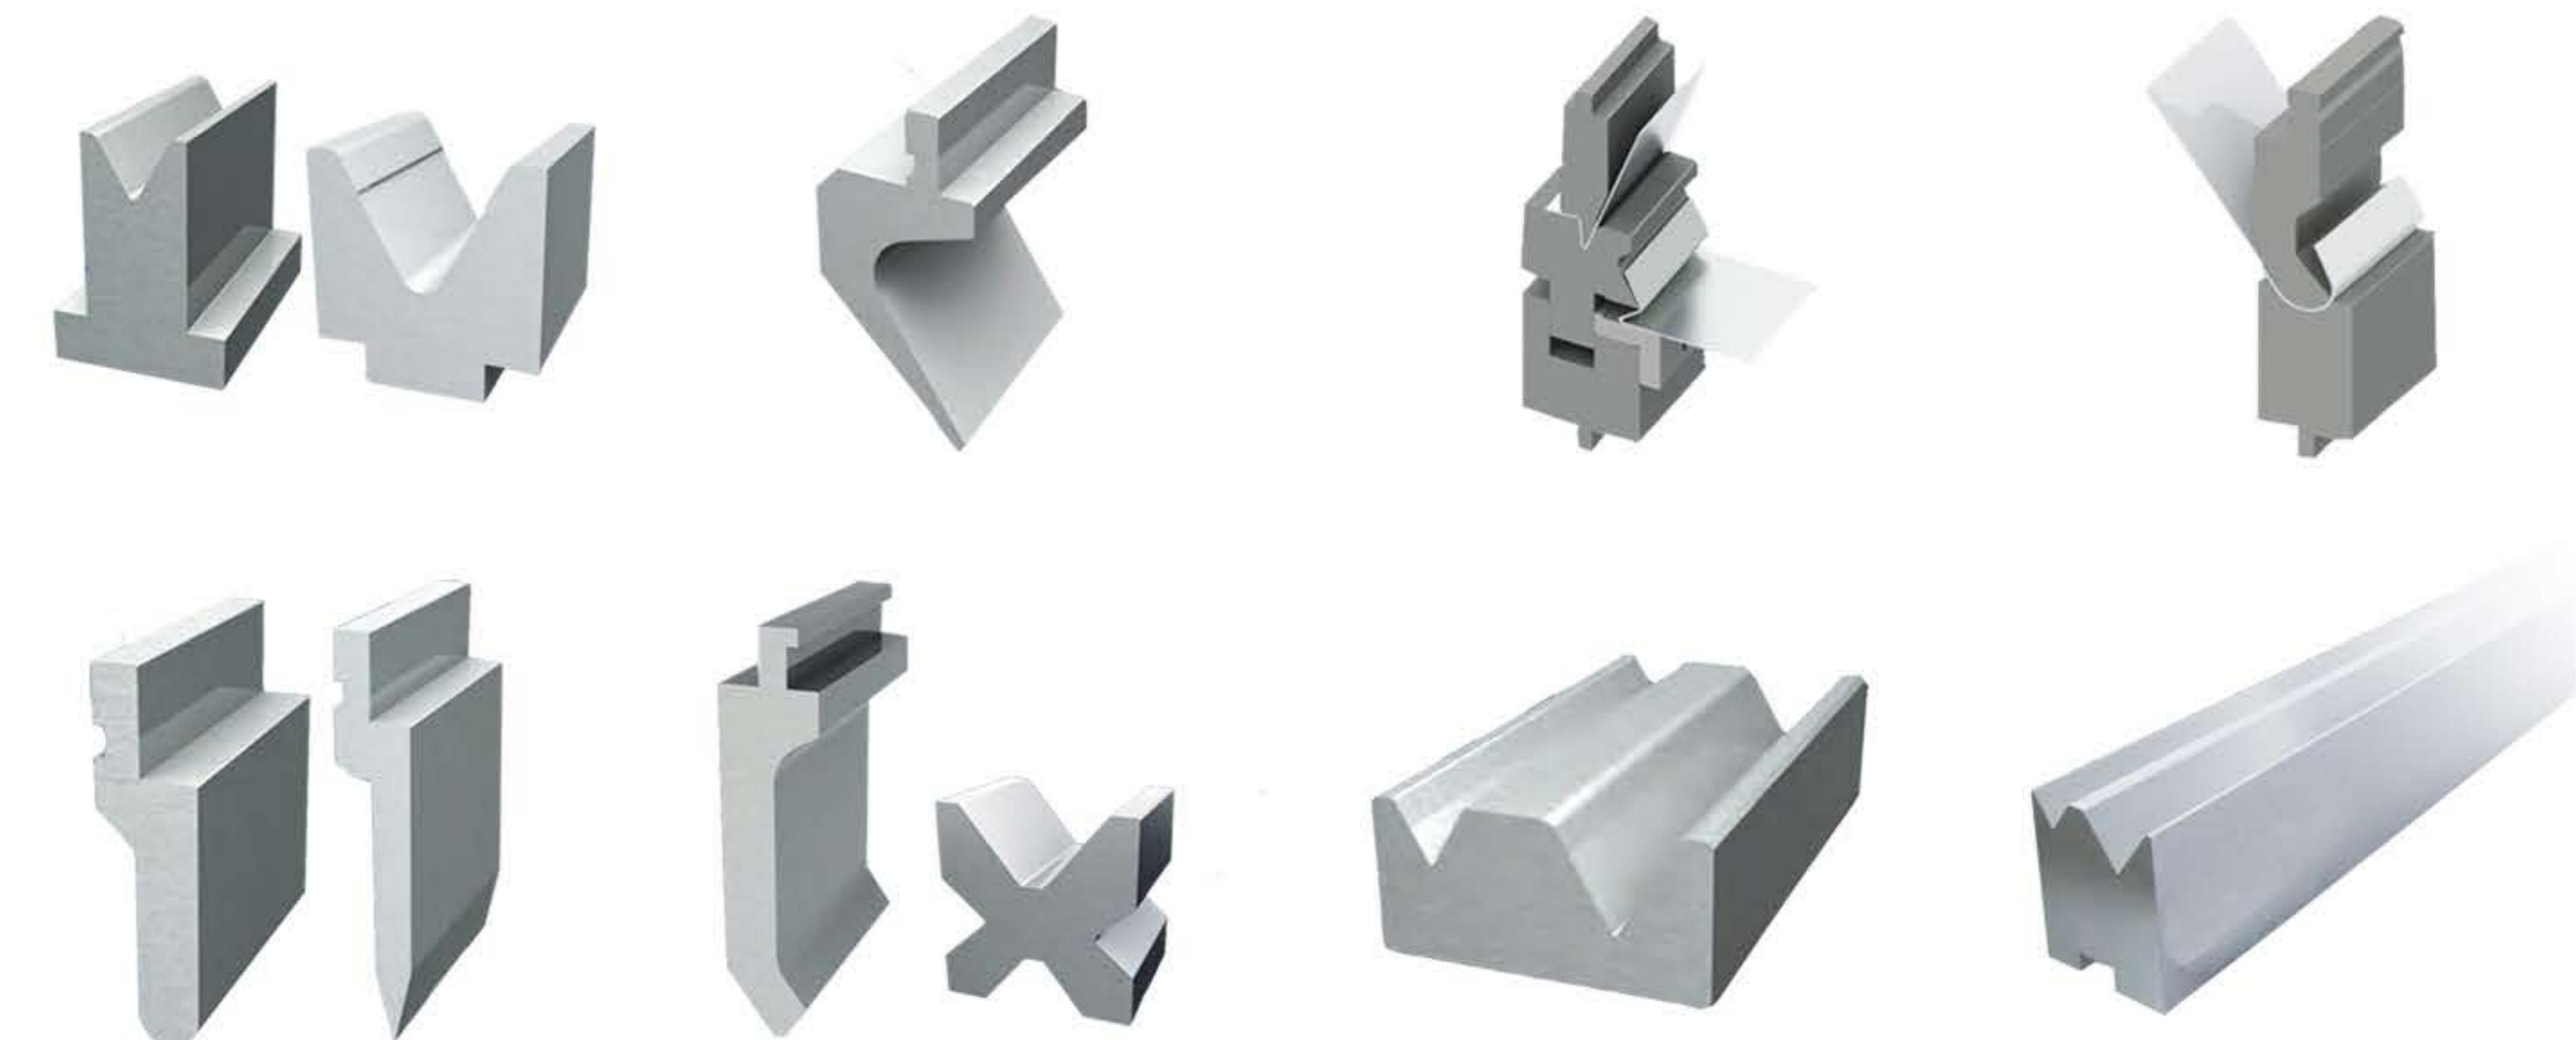

CNC system according to the load force of the workpiece bending size (the force causes the slider and the work table vertical plate deflection deformation), compensation calculation required, automatic control and relative displacement of convex wedge block, so as to effectively compensate the deflection slider and table upright plate deformation, bending workpiece can get the ideal.
