CNC ELECTRIC SERVO BRAKE

Dener Makina was established in 1974 in Kayseri Old Industrial Zone. Since 2000, Dener Makine has focused on the production of CNC Sheet Metal Processing Machines and continues its production with a wide range of products including Guillotine Shears, Hydraulic Press Brakes, Ball Screw Press Brakes, Servo Electric Press Brakes, Plasma Cutting Machines and Fiber Laser Cutting Machines.

In 2016, the company made a significant investment by incorporating 155,000 m² factory buildings and 27,000 m² social facilities located on 1,300,000 m² of land owned by TAKSAN A.Ş. In the new period, Taksan Integrated Facilities started the production of CNC Metal Processing Machines such as Double Column Machining Centres, 5 Axis Simultaneous Machining Centres, Vertical Machining Centres, Lathes and Grinding Machines.

Dener Makina, CNC Sheet Metal Processing Machines and CNC Metal Processing Machines, with its wide range of machinery production, half a century of experience, qualified workforce and multinational R&D centre, is the first in the world by offering important investment products to the world industrial enterprises.

SERVO ELECTRIC PRESS BRAKE

Dener Servo Electric Press Brakes are no-hydraulic, flexible, reliable and advance bending machines. This next generation machine idea combines green-eco firendly machines with productivity, accuracy, flexibility and reliability. The new concept offers low power consuption, less maintenance, no hydraulic oil for operation.

Dener Electric Press Brakes come with an advance CNC controller, fast and accurate punch and die clamping, and a multi axis back gauge system. Operators easily make perfect sheet metal parts with very low cost.

Dener utilizes the most stringent manufacturing technologies during the production to manufacture highest quality machines. Standard Dener electric press brake come with a 3D graphical CNC controller offering simple operation, quick and easy 3D or numerical part programming easy set up of the machine, and auto calculation of the bend sequence. Optional 3D off line programming features the ability to create programs on an ofice PC then transfer to the CNC control by LAN or USB

**“EXCEED YOUR
EXPECTATIONS”**

HOW SERVO ELECTRIC PRESS BRAKE WORKS

Servo Brake pressing force by means of synchronized two servo motors that transfer the power by the help of special belt and pulleys. During the upper beam down movement, the servo motors place a tension force F on the belt that is multiplied equally in every belt segment. The force of each motor (F) creates a down force many times greater. The ram return force is derived from mechanical springs located at the side of the machine. These springs are compressed during pressing time, but recoil after completion of the bend pushing the ram to a programmed top of stroke position.

The Servo Brake has a closed O-frame system that supplies a rigid frame with no deformation under large forces. The result is better tool alignment and more accurate bends.

Servo Electric Press Brake provides energy saving up to 50%
Servo Electric Press Brake has %50 energy saving compared with hydraulic press brakes.

Servo Electric Press Brake is faster up to 30%
Servo Electric Press Brake is shown to be up to 30% faster than hydraulic press brake. Shorter response time one of the biggest advantages of servo electric press brake.

Servo Electric Press Brake is eco - friendly machine
Servo uses 100% electrical power instead of hydraulic oil and hydraulic components. Less pollution - best solution.

Servo Electric Press Brake provides high productivity
Servo has high acceleration, high deceleration. The quick change of the moving direction is a advantage for high productivity and efficiency. Servo has less maintenance cost.

Servo Electric Press Brake provides advanced bending
Servo is a flexible, reliable and advance bending machine. Servo Electric Press Brake combines high accuracy, flexibility and reliability. This concept offers low power consumption , less maintenance and no hydraulic oil or components for operation.

Servo Electric Press Brake works quietly
Servo working system has no noise and provides silent working conditions.

X-Prime Type Back Gauge

Gauging is a main concern for press brake operators. Whether you require complex part multi station bending, single bending, or production of taper bends, Servo Electric Press Brake offers solutions with six different back gauge options. Depending on the geometry of the parts and their complexity, all back gauge models are specially designed and manufactured to reach high precision and high speeds.

Optional Back Gauge Systems

- X1, X2, R
- X, R, Z1, Z2
- X, X', R, Z1, Z2
- X1, X2, R, Z1, Z2
- X1, X2, R1, R2, Z1, Z2 (ATF TYPE)

DENER SERVO ELECTRIC PRESS BRAKE BACK GAUGE SPECIFICATIONS

X - R type back gauge (standard) Ball Screw for X axis, double linear guide for X axis. 750 mm X axis stroke, 250 mm R axis stroke 2 Pcs back gauge finger manual lateral movement on linear guides Positioning accuracy: +0,03 mm Repeat accuracy: +0,03

SERVO ELECTRIC PRESS BRAKE

AIR BENDING TONNAGE CHART

Required press force at 90° air bending, force in t/m.

The charts below give the appropriate tonnage to air bend mild steel.

Bending force for other metals:

- Soft aluminum : Tons per unit length x 50%
- Aluminum alloys heat treated : Tons per unit length x 100%
- Stainless : Tons per unit length x 150%
- Bottoming : Tonnage requirements are three to five times greater than for air bending.
